## "Our Slogan"

QUALITY · SERVICE · SATISFACTION

## *Foreword*

THIS catalogue has been specially compiled for the service of architects and home-owners who require the most perfect and up-to-date types of Baths, Lavatories, Toilets, Sinks, and Laundry Tubs, together with all necessary accessories and wall fixtures, at the most favorable prices, for new buildings or for alterations, but who do not require such complete and detailed lists and information as will be found in our complete General Catalogue. We have only presented a few typical examples and suggestions in this abridged catalogue, but we shall always be happy to furnish further illustrations, etc., on receipt of enquiries. Those who write us regarding their requirements will receive a prompt reply, with all additional information needed, which will be given with the earnest desire to be really helpful in every case.

OUR travellers will call and furnish illustrations, prices, roughing-in measurements, and all such details, on receipt of a letter or telephone enquiry, and we can give both architects and clients the assurance that we can supply any practical and current type of plumbing fixture for every kind of building, at the lowest competitive prices, to suit every degree of luxury, solidity, and simplicity, together with efficiency and service.

WE cordially invite architects and clients to visit our showrooms, in which we display a very comprehensive selection of plumbing fixtures in each category, and from the simplest types through the many grades up to the most luxurious, at prices to suit every class of installation, and every description of building.

## TRADE CUSTOMS AND SALE CONDITIONS

All Quotations and List Prices are subject to change without notice.

Designs of Articles are not guaranteed as to details, as modifications and improvements are made as found necessary.

All Contracts are subject to Strikes, Accidents, or other causes beyond our control.

We guarantee our goods only to the extent of replacing those showing defects of workmanship or material, when used for the purposes for which they are intended, and providing that we are immediately notified. No charges for labor or expenses to replace defective goods or occasioned by them, will be allowed. If any goods prove defective the measure of damages is the price of the defective goods only.

No goods are to be returned without first obtaining our consent, and we require to know the date of our invoice.

All goods are carefully checked and re-checked and packed by experienced men. Every care is taken to ensure against breakage or loss in transit. Therefore our responsibility ceases when goods are delivered to the Transportation Co. and we obtain their receipt therefor in the shape of a clean Bill of Lading. Transportation Companies are responsible for goods damaged, broken, or lost in transit, and all claims arising therefrom must be made by the purchaser against the Transportation Company.

We use every effort to avoid mistakes. Should any occur we request our customers to report same promptly, and we will endeavor to adjust the matter speedily and satisfactorily.

## "Pembroke" Baths

*Made of Cast-Iron Enamelled  
All Over*

IN the following pages are shown various types of these popular Baths, which are enamelled on all exposed surfaces, and built into the walls and floors, so that they are strictly clean and sanitary, and there are practically no places where dust, dirt and moisture can collect.

We illustrate these "PEMBROKE" Baths for right or left hand corner, and for recess, both with and without showers, to suit every type of installation.

These "PEMBROKE" Baths are without feet, resting directly on the floor, and are consequently a few inches lower than the usual type of bath on feet, say 17½" high from floor to top of rim, making them very easy to enter, more especially for children.

Another point to note is that there is quite a large wall surface behind these baths, so that considerable economy is effected in the cost of wall and floor tiling.

THOMAS ROBERTSON & COMPANY, LIMITED

## "Pembroke" Enamelled Iron Built-in Recess Bath

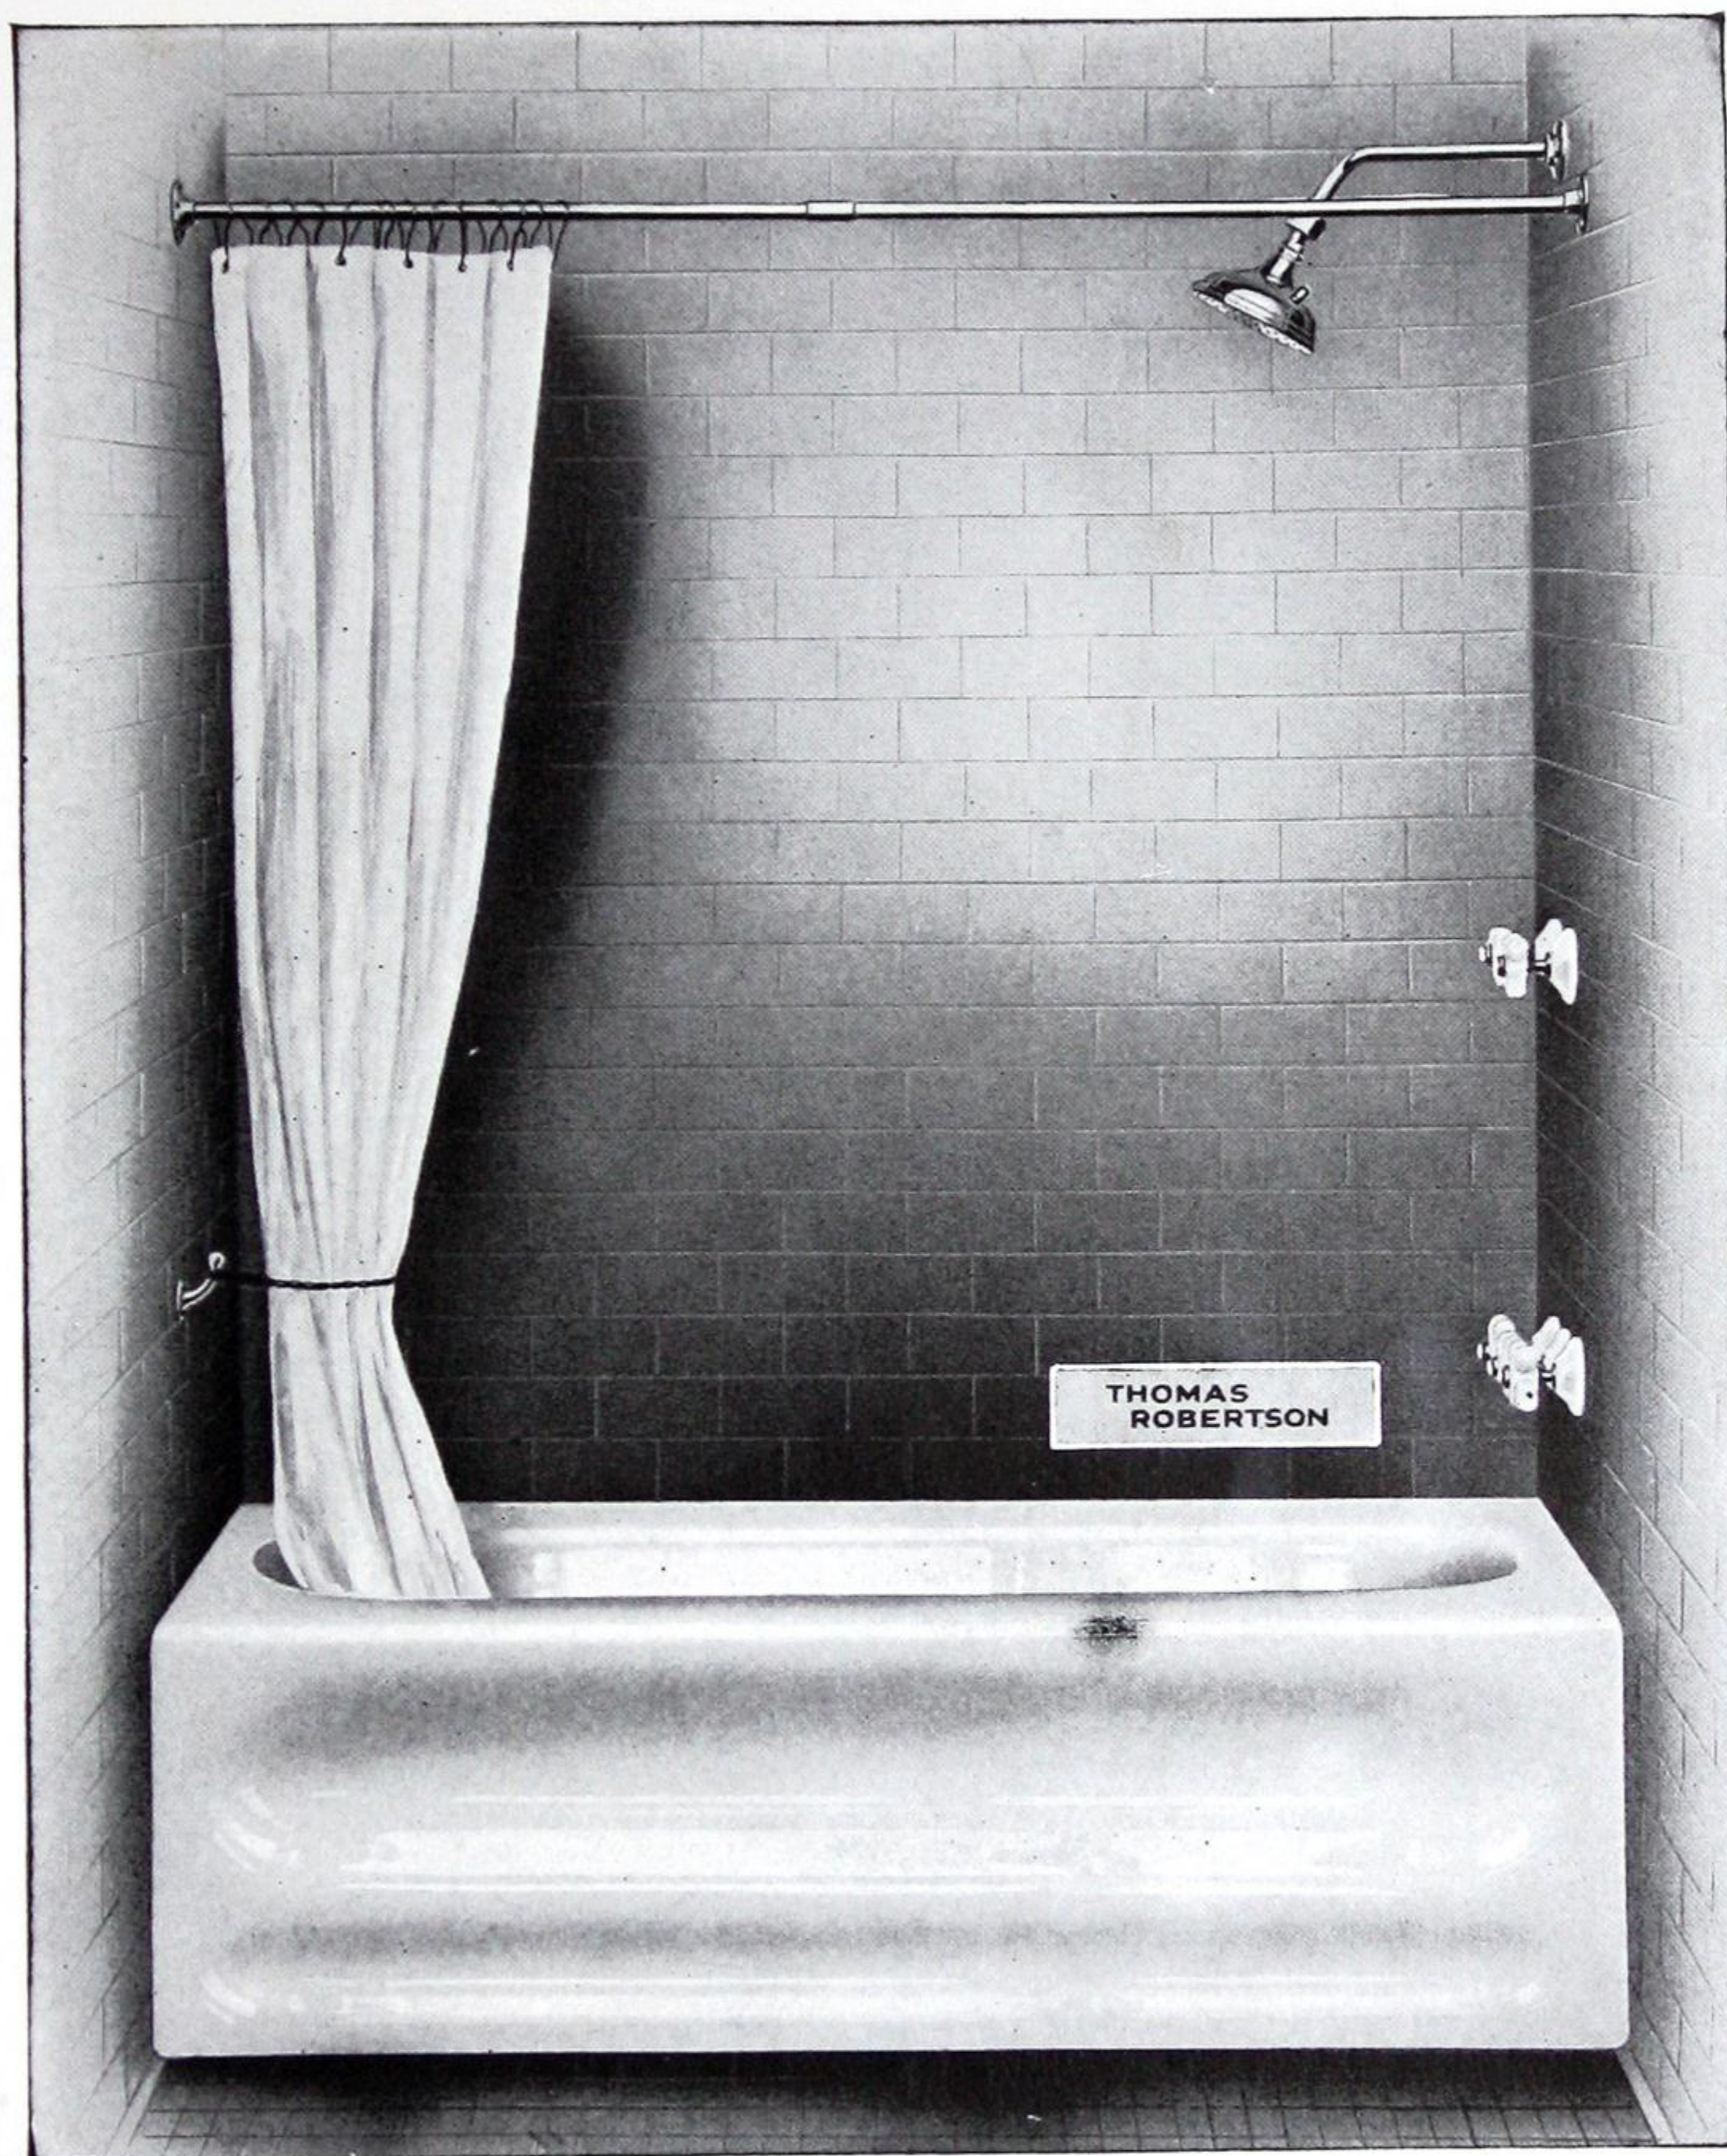

Fig. F-1 (showing right hand outlet)

Enamelled all over, one-piece "Pembroke" bath for recess, right or left hand outlet, concealed hot and cold bath supply combination with  $\frac{1}{2}$ -inch compression stops, and lift drain;  $\frac{1}{2}$ -inch hot and cold compression stops to shower; china cross handles and escutcheons; nickel-plated shower head with swivel ball joint.

## The "Central" Two-way Bath and Shower Combination

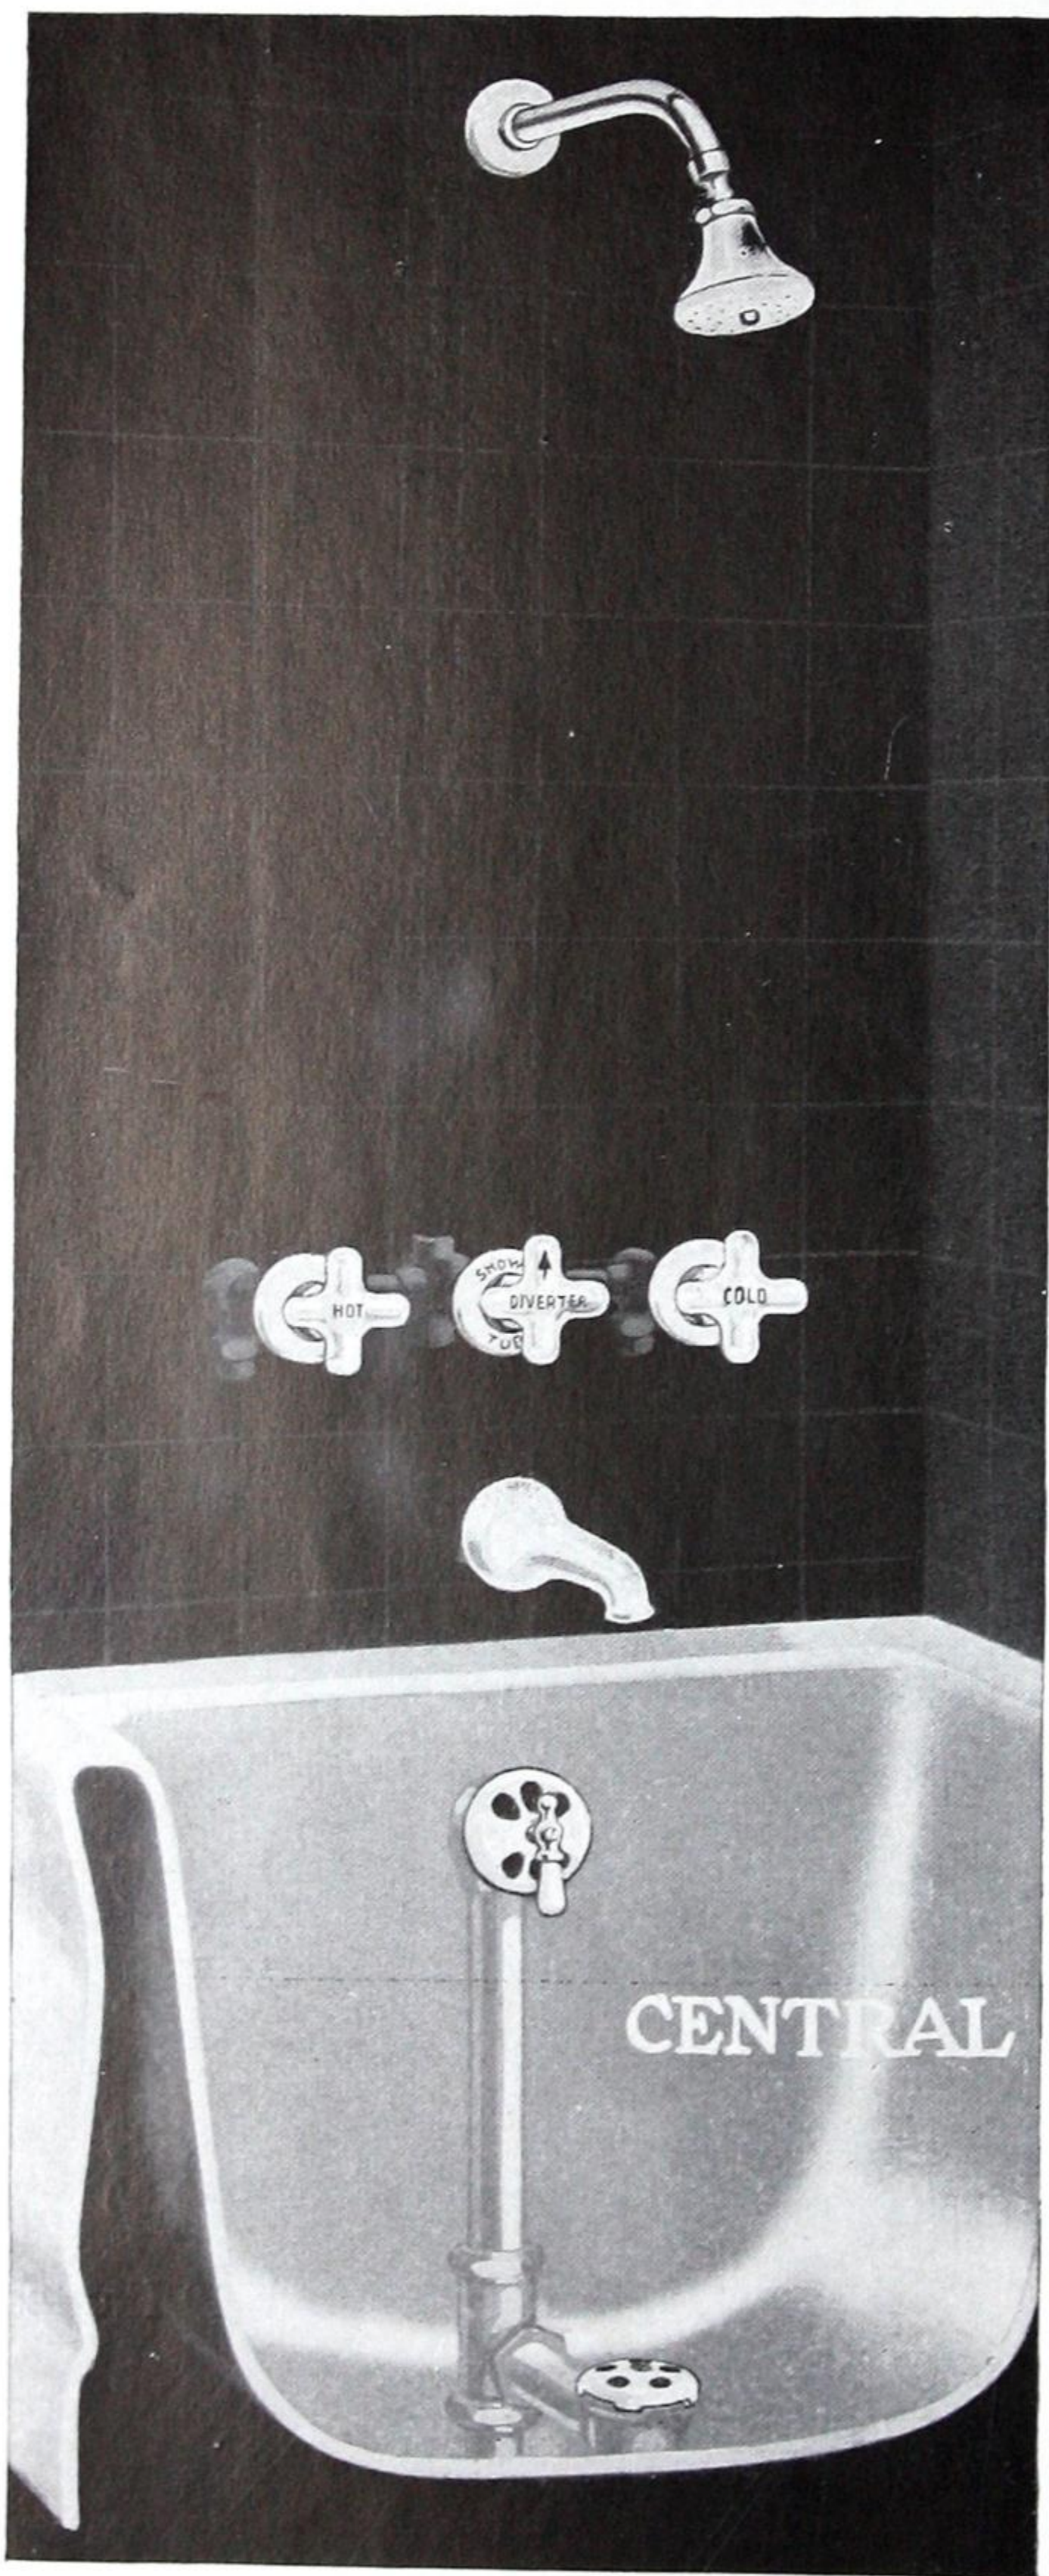

Fig. F-18

*Designed for simplicity and economy, there being only the two connections to be made, to the Hot and Cold supplies.*

The water is diverted to shower or bath, as desired, with a half-turn of the handle. Both water and temperature are perfectly controlled. No panel in the back wall is required.

The water can be tempered through the Nozzle and then turned into the Shower, eliminating the risk of scalding.

Two-way Tub and Shower Combination, china handles and escutcheons, china ball-joint Shower Head, and Nozzle; two-way valve to supply shower and tub, lever action lift drain fitting and overflow, with china strainers, as illustrated.....**\$60.00**

If with integral china Soapdish and Nozzle as Fig. F-21 add ..... **\$3.00**

If the Shower Head, Nozzle, and Strainers are nickel-plated, price complete..... **\$52.00**

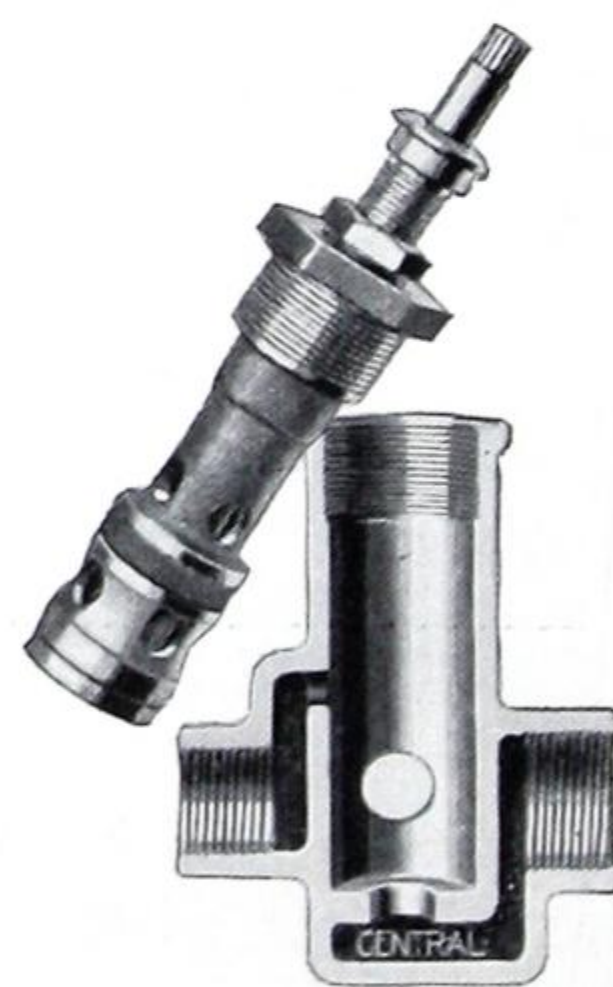

Fig. F-19

*showing working parts*

All working parts including seat of diverting valve can be repaired or renewed from wall inside bathroom.

THOMAS ROBERTSON & COMPANY, LIMITED

## The "Triplex" Two-way Bath and Shower Combination

*Designed for simplicity and economy, there being only the two connections to be made, to the Hot and Cold supplies*

The two-way valve is so constructed that the shower and tub cannot be shut off at the same time while the supplies are open, which prevents water from backing up in the system.

The water can be tempered through the Nozzle and then turned into the shower, eliminating the risk of scalding.

The two-way valve is of "Sleeve Valve" construction, having no ground plug to wear out, nor any seats to be replaced; the "sleeve valve" takes up wear automatically which assures a long service and prevents leaking or dripping.

The drain fitting is actuated within the fixture by a strong nickel silver non-corrosive chain, and is furnished with 3" tail piece, male or female outlet.

"Triplex" tub and shower combination, china handles and escutcheons, china ball-joint Shower Head, and Nozzle; two-way valve to supply shower and tub, lever action drain fitting and overflow, as illustrated..... **\$50.00**

If with integral china soap-dish and nozzle, as Fig. F-21, add..... **3.00**

If the shower head and nozzle are nickel-plated, price complete..... **45.00**

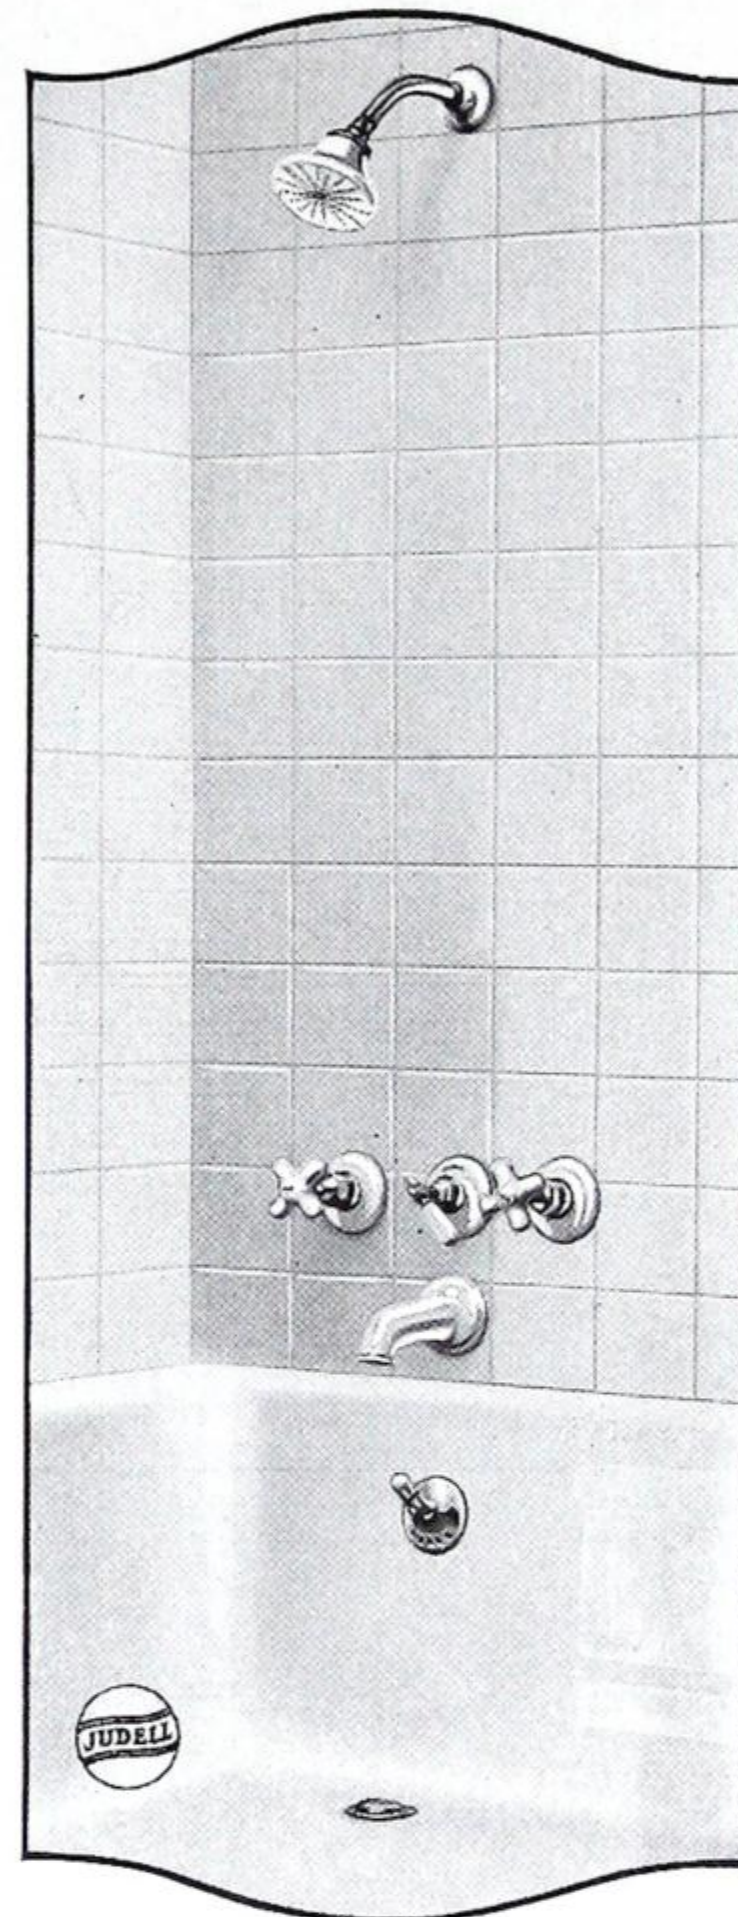

Fig. F-20

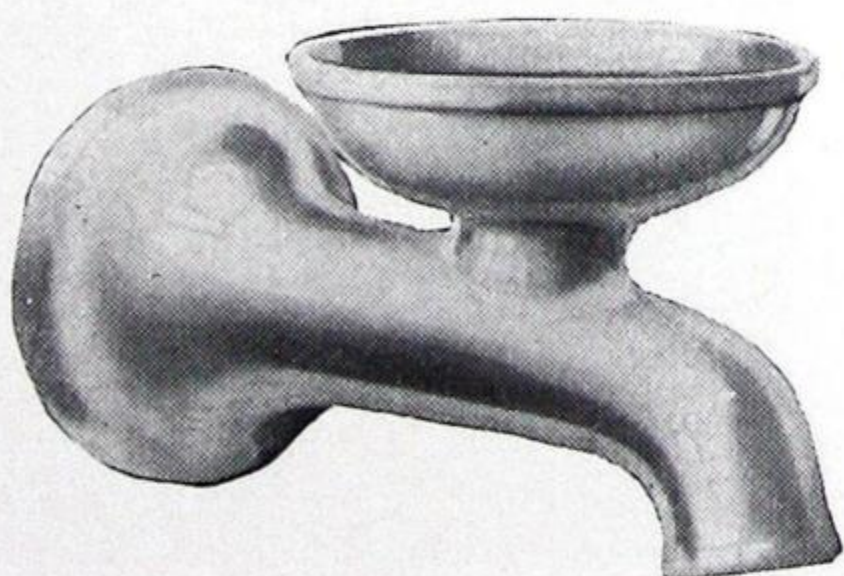

Fig. F-21

### Chinaware Integral Nozzle and Soap-dish

As shown..... **\$4.50**

THOMAS ROBERTSON & COMPANY, LIMITED

## Built-in Bath and Shower Fittings

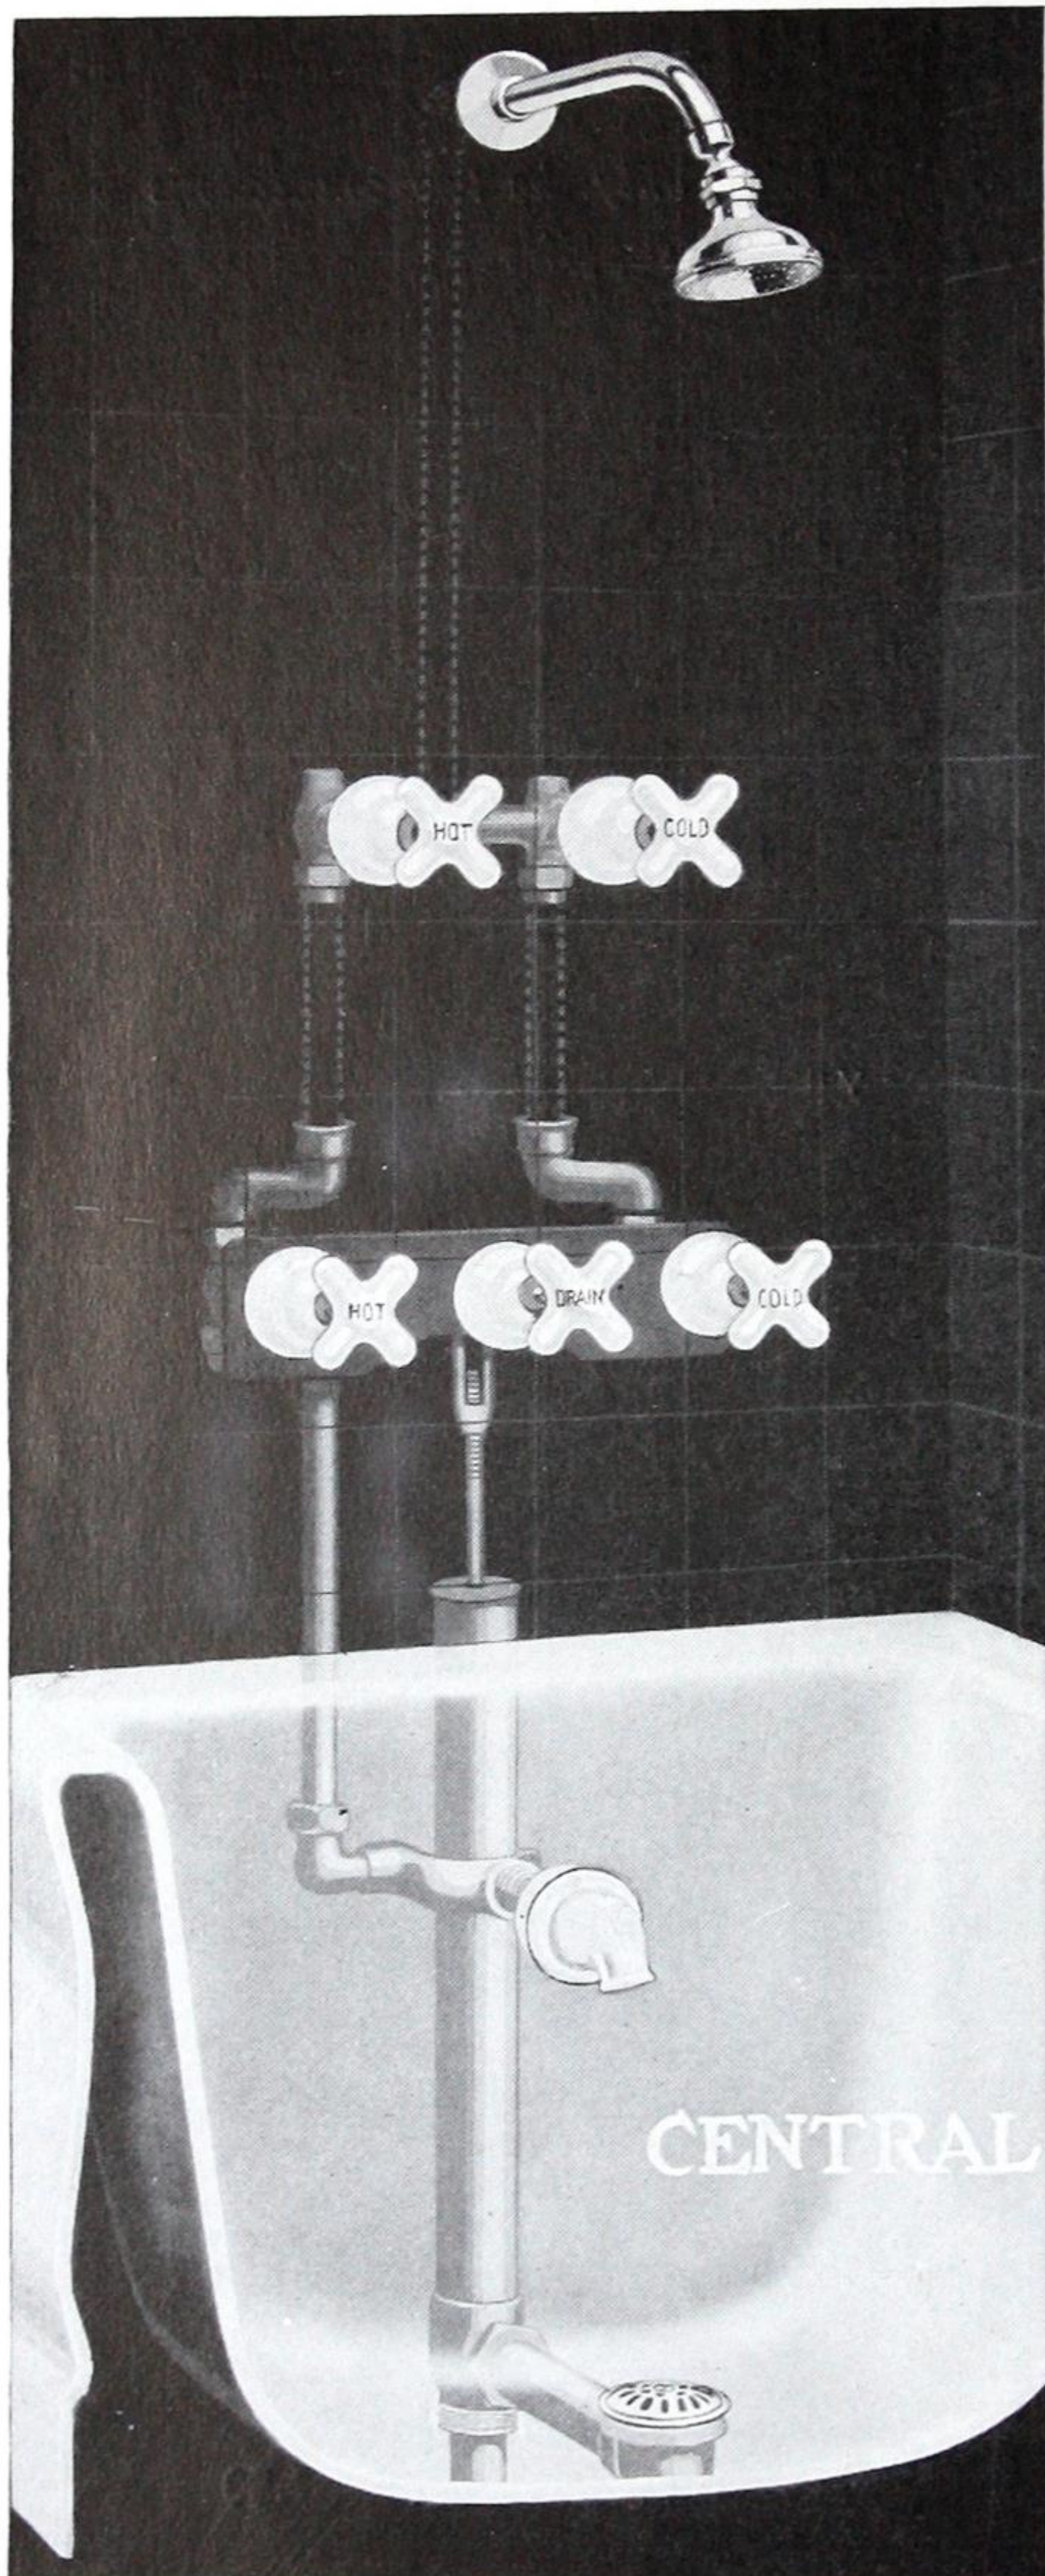

Fig. F-22

Concealed combination  $\frac{1}{2}$ " hot and cold bath valves and lift drain; N.P. Shower fitting with combination hot and cold valves, 4-inch shower head with ball-joint; china handles and escutcheons, china nozzle to bath supply, N.P. drain strainer, complete as illustrated .....\$72.00

If with chinaware shower head, as Fig. F-23.....\$75.00

If china drain strainer is supplied, add.....\$1.00

If with integral nozzle and soap-dish, as Fig. F-21, add.....\$3.00

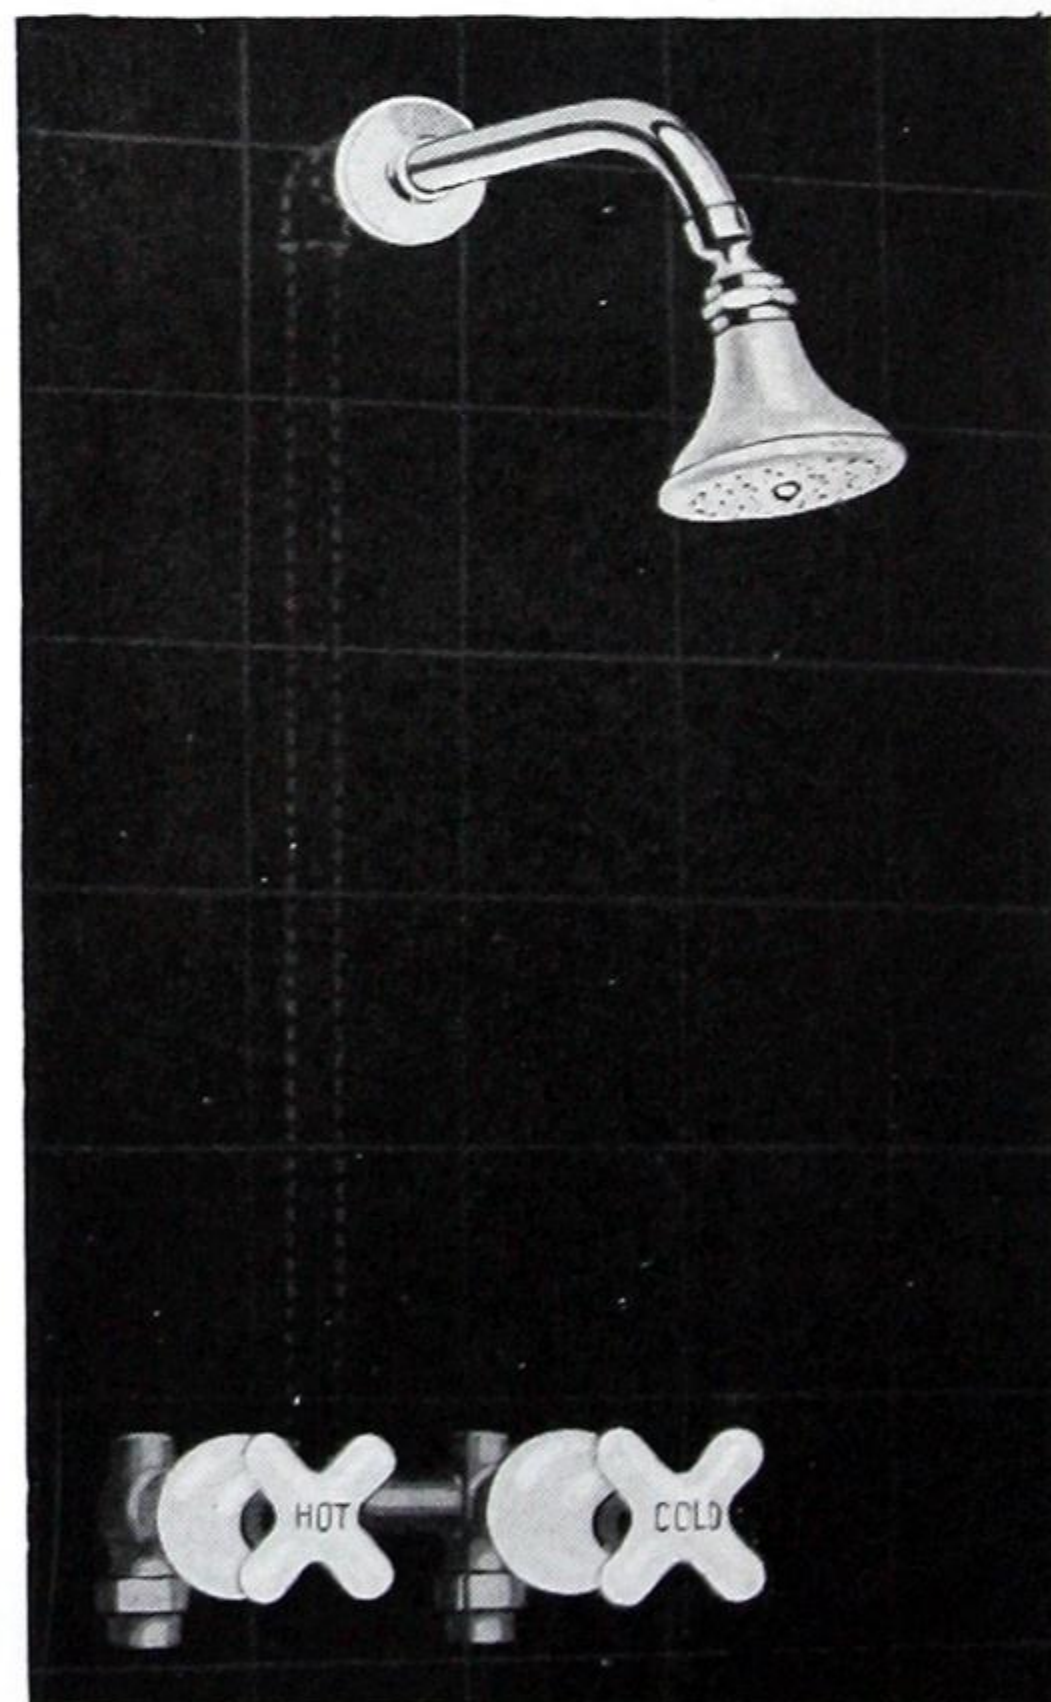

Fig. F-23

This fitting can be supplied with  $\frac{3}{4}$ " Unions if desired.  
Prices on application.

134 Craig Street, W.

Montreal, Canada

THOMAS ROBERTSON & COMPANY, LIMITED

## Built-in Bath and Shower Fittings

Fig. F-26

FIG. F-26

Combination Drain and Overflow with adjustable slip-joint Tee permitting 2" adjustment. **\$5.00**

*Particulars of other types of Bath and Shower combinations with Hot and Cold MIXING VALVES will be found on the following pages.*

THOMAS ROBERTSON & COMPANY, LIMITED

## Built-in Bath and Shower Fittings

Fig. F-27

Built-in Bath and Shower combination with hot and cold MIXING VALVE having china handle and dial, compression stops with china handles and escutcheons, to Bath and Shower. N.P. Shower Arm with 4-inch ball joint adjustable Shower Head. Top nozzle or over-rim supply to Bath. Lift drain with overflow, or combination drain and overflow with rubber stopper.

*The upper compression stop to Shower is sometimes omitted, so that the Bath and Shower cannot be shut off at the same time while the supplies are open. This compels the bather to shut off the supplies, thus preventing water from backing up in the system and interrupting the normal circulation of the hot and cold water, an important matter in Hotels, Apartment Houses, Clubs, etc.*

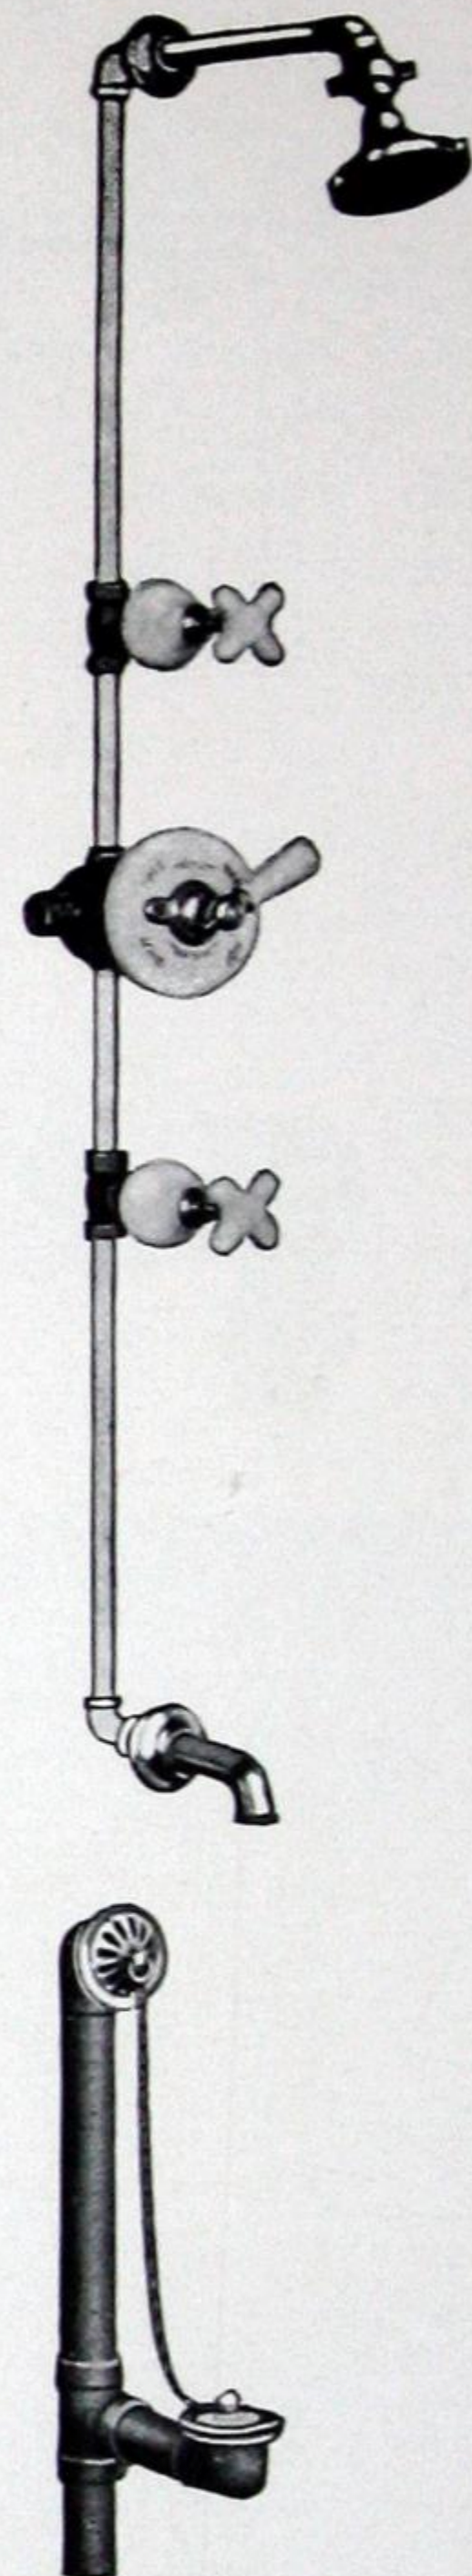

Fig. F-28

Fig. F-27 with top nozzle supply, and lift drain having china handle and escutcheon.

Price complete, with  $\frac{1}{2}$ " supplies \$83.00. With  $\frac{3}{4}$ " supplies \$93.00.

Fig. F-28 with over-rim spout supply, combination drain and overflow, chain and rubber stopper.

Price complete, with  $\frac{1}{2}$ " supplies \$73.40. With  $\frac{3}{4}$ " supplies \$78.00.

If supplied with China Shower Head as fig. F-24 add \$3.50

THOMAS ROBERTSON & COMPANY, LIMITED

## Built-in Bath Fittings

## Powers' Thermostatic Temperature Controller for Showers

Controllers Nos. 1, 3 and 4

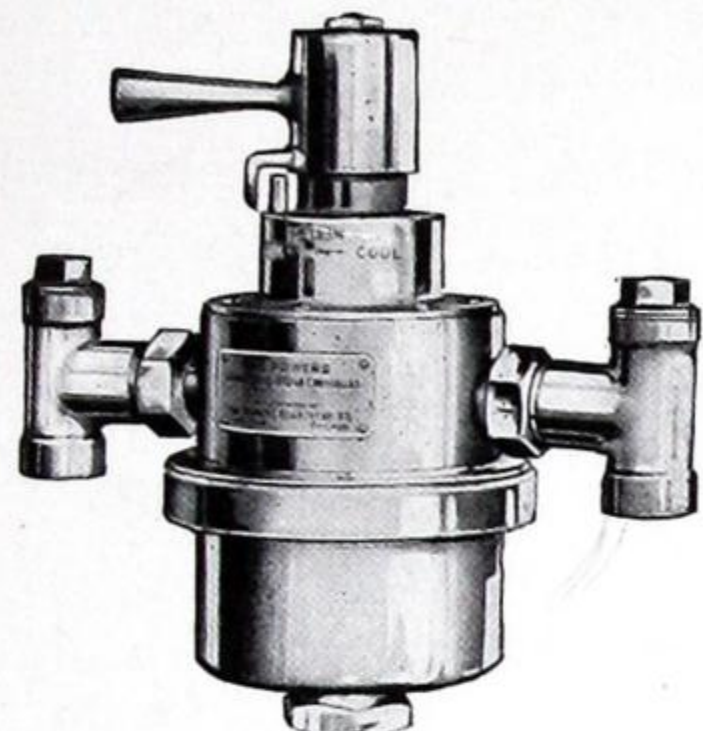

Fig. F-83

HOT WATER DELIVERED  
AT ANY DESIRED  
TEMPERATURE

DESIGNED TO GIVE  
PROTECTION AGAINST  
SCALDING

Controllers Nos. 5 and 6

Fig. F-84

This Controller is different to the regular "mixing valve" as it is a true thermostatic water mixer, delivering the water at any desired definite temperature. For Shower fittings the usual maximum limit is 110° and for hot water circulation 135°.

No.	Description	Capacity Gallons per Minute	Connections		Price Each
			Inlet	Outlet	
1	For Individual Shower.....	15	1/2"	3/4"	\$132.00
3	For 4 Shower Heads.....	25	3/4"	1"	165.00
4	For 8 Shower Heads.....	50	1"	1 1/4"	200.00
5	For 15 Shower Heads.....	80	1 1/4"	1 1/2"	230.00
6	For 20 Shower Heads.....	100	1 1/2"	2"	245.00

*The above capacities are based upon 40 lbs. water pressure*

**These prices do not include Stops, Thermometers, Etc.**

For batteries of Shower fittings this thermostatic controller will deliver water at any desired temperature below the danger (or scalding) point. It is provided with variable or locked adjustment, as preferred.

Quotations will be furnished on receipt of specifications.

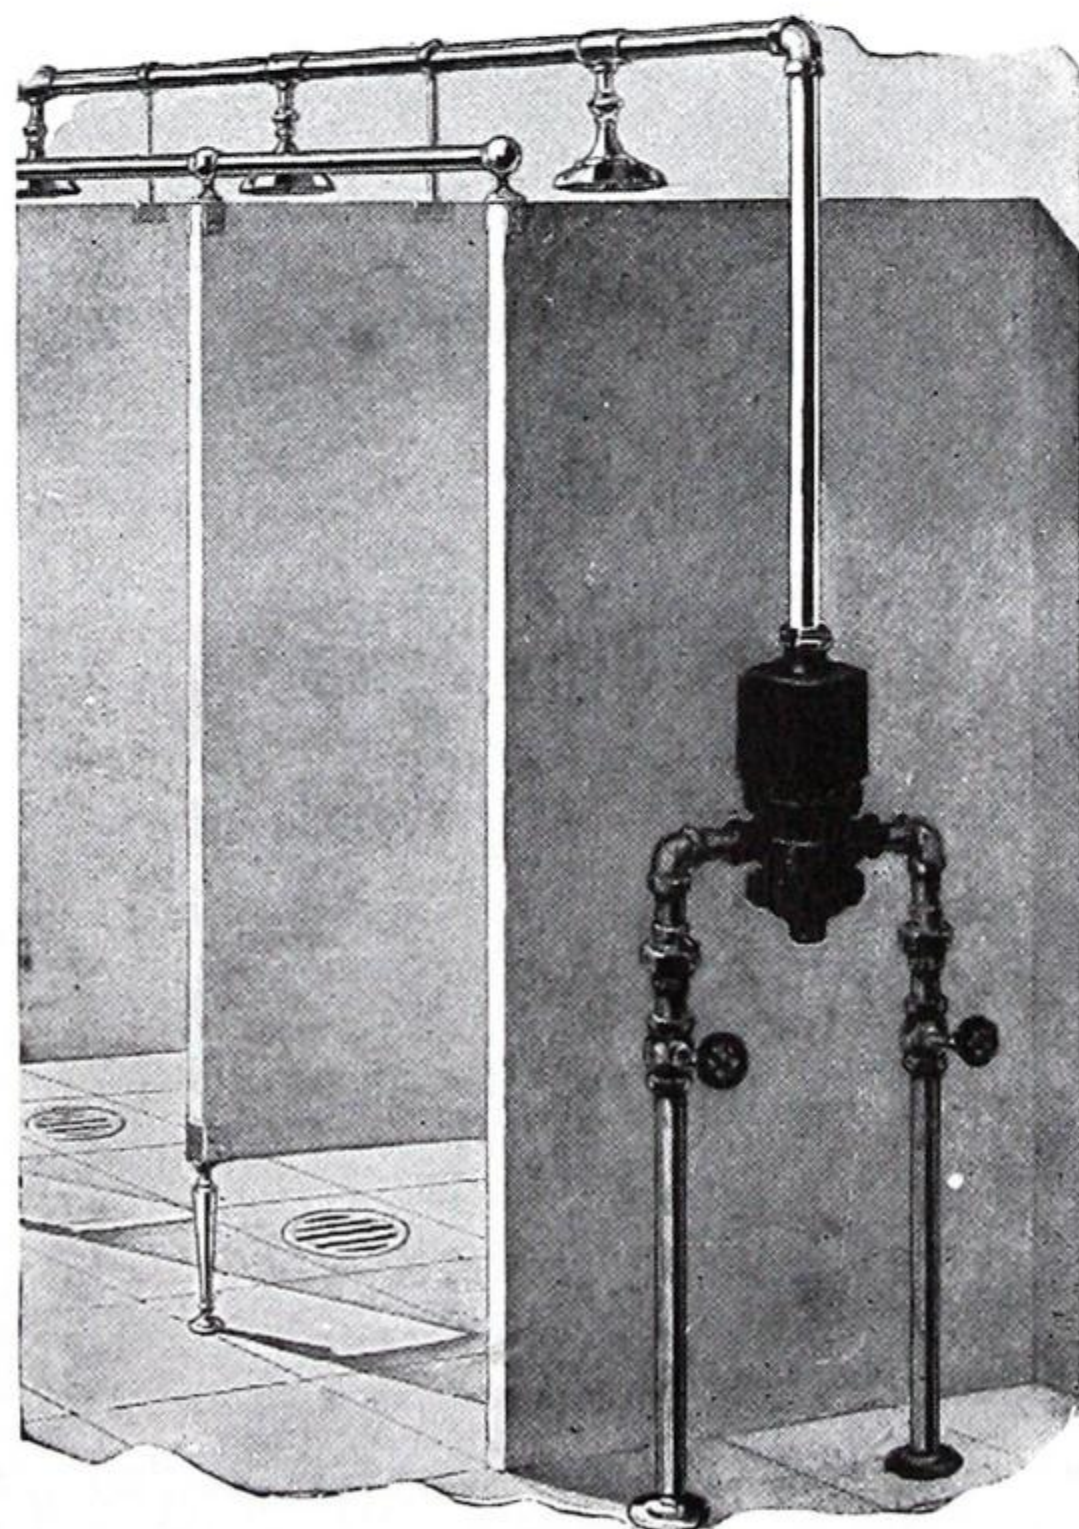

Fig. F-85

For "continuous flow" baths, and other Hospital fixtures (Sinks, Baby Baths, etc.) these thermostatic controllers giving exact desired temperatures are widely used.

Quotations for any special arrangement on application.

## Heavy Vitreous Ware Lavatories

THESE lavatories are made of "solid vitreous ware" of which not only is the surface vitreous, but the body of the ware itself is vitreous through and through. The surface is absolutely smooth and of glistening whiteness, whilst this glaze—during the firing process—becomes an inseparable part of the ware itself.

ON the following pages we illustrate several standard types of Heavy Vitreous Ware Lavatories, and shall be pleased to quote for any other special types on receipt of particulars of requirements.

THOMAS ROBERTSON & COMPANY, LIMITED

## Heavy Vitreous Ware Pedestal Lavatory

## Closet Fixtures with "Royal" Flush Valves

For the better class of installations these "ROYAL" FLUSH VALVES are rapidly supplanting all other methods of flushing Water Closets, Urinals, and Slop Sinks.

These Valves flush the same amount of water at each operation, regardless of whether the Handle (or Push Button) is held or released, and thus automatically prevent either an excessive or an insufficient flush, which is a very important feature where Valves are used by the general public.

They can be used on either direct or storage tank supply, and do not require regulating for any pressure between 5 and 100 lbs. Each Valve is thoroughly tested before leaving the factory.

They are noiseless, easy to operate, simple in construction, and have a wide range of service, either exposed or concealed.

Fig. F-235

### "SIRDAR"

White Chinaware Syphon Jet Bowl, Brass Spud Connection and Floor Flange, Nickel-Plated Brass "ROYAL" Flush Valve with Oscillating Lever Handle and back inlet with straight stop. Oak Seat and Cover with N.P. Bar Hinge.

## Closet Fixtures with "Teck" Flush Valves

Fig. F-246

### "BELLCO"

Heavy Chinaware Syphon Jet Bowl with Extended Lip.

Brass Spud Connection and Floor Flange.

Nickel-Plated "TECK" Flush Valve with Oscillating Lever Handle, and side inlet with Angle Stop.

Oak Seat (Open Front) with Semi-Reinforced Nickel-plated Bar Hinge.

Price, complete..... **\$72.00**

If with Cover to Seat, complete **76.00**

If Stop is not required, deduct **4.00**

These "TECK" Valves embody all the latest advantages and improvements. The period of flush may be regulated without turning off the water by simply removing two screws and turning the by-pass. Any dirt in the by-pass can at once be removed without further dismantling the valve.

The "TECK" Flushing Valve can be adapted to all closet fixtures shown on preceding pages.

## The "One-Piece" Water Closet

A one-piece fixture, no tank to attach to wall, only two connections—outlet from bowl and supply to tank; quiet in operation, powerful flushing action and thoroughly cleansing; cover fastened to tank. Made of the highest grade vitreous china.

### Price Complete

## "Kohler" Electric Sink

FOR WASHING DISHES AND PLATES, CUPS, GLASSES, CUTLERY, Etc.

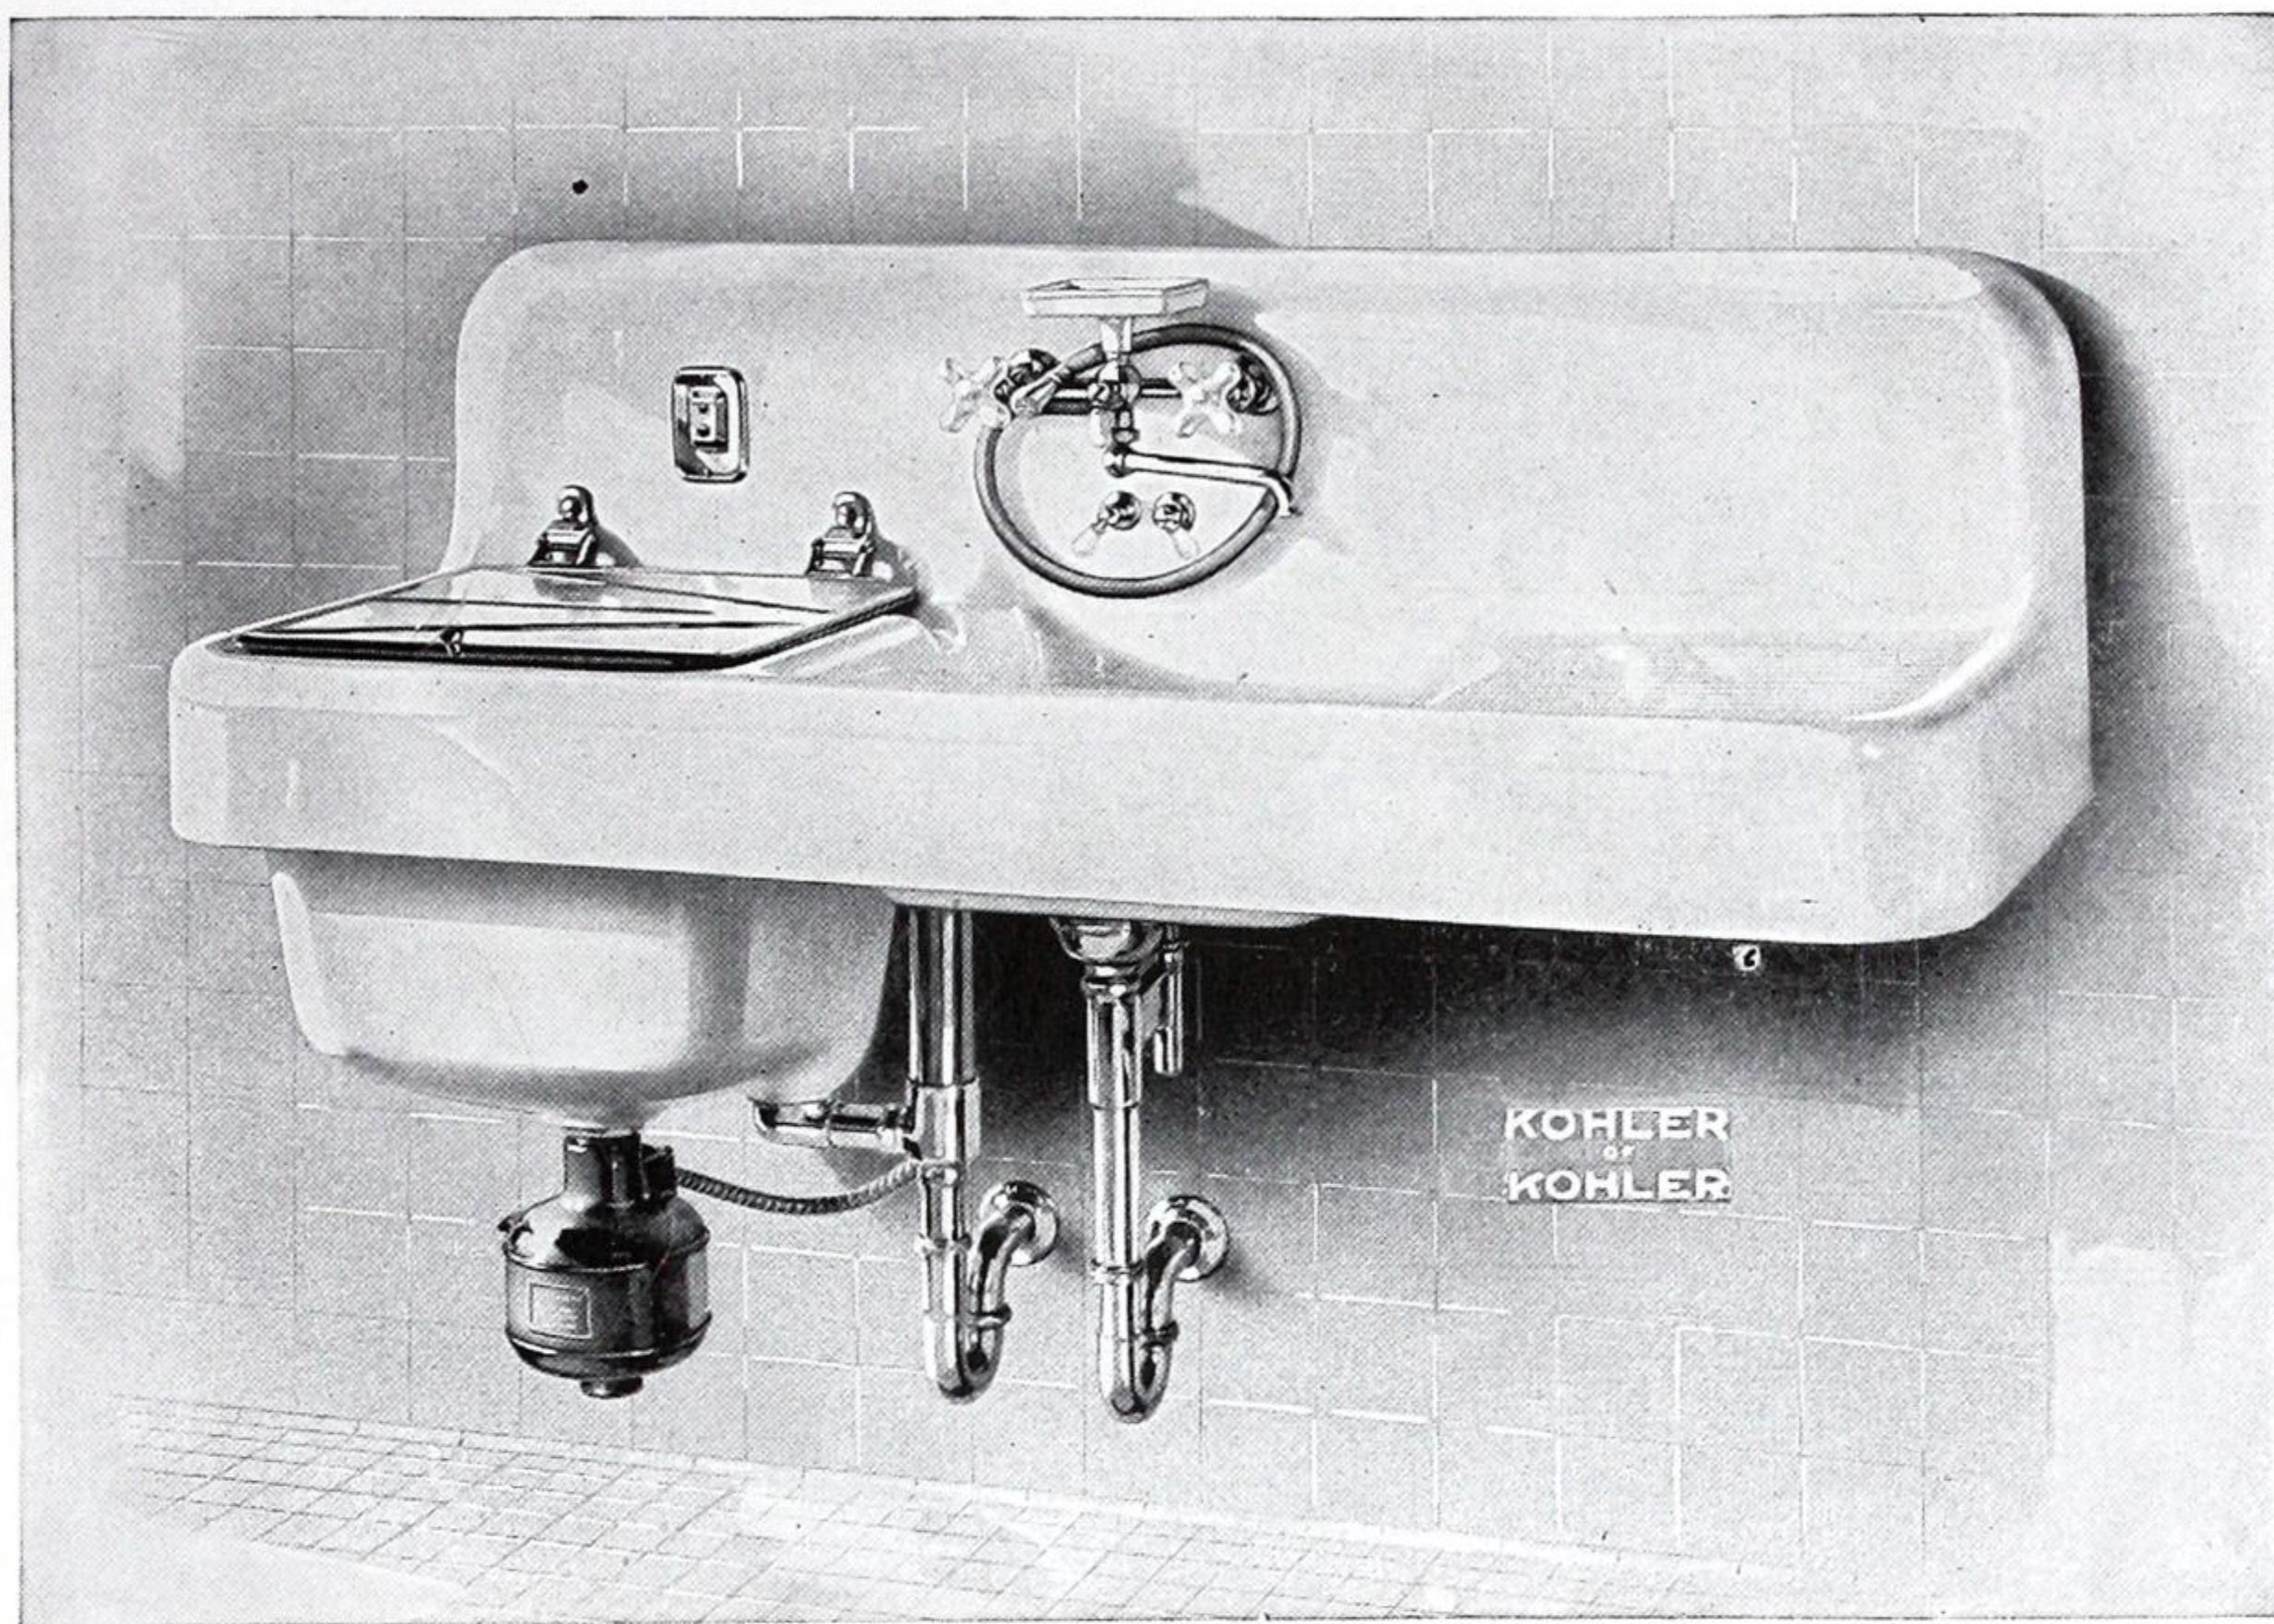

Fig. F-351

Set in the centre of the dish-washing compartment is a metal cylinder with a thousand perforations. Inside this cylinder revolves a screw—the "impeller"—which catches up the water, lifts it, and hurls it in stinging jets through these thousand openings. These jets beat upon the dishes. They are thrown back by the walls of the compartment. They wash clean the front and back of every plate, the inside and outside of every cup or glass, between the tines of every fork. This "spray tower" is unique. Because of it the dishes are not submerged, even partially, in dishwater. No "high-water mark" can be left—no greasy deposit. There is no swirling or centrifugal action of the water which might slight the dishes in the centre of the compartment. The KOHLER ELECTRIC SINK washes all of the dishes. It washes them beautifully clean. Anyone can operate it satisfactorily, the very first time. There is practically nothing to learn. The operating mechanism is self-cleansing and a quick rinsing of the baskets and the sides of the compartment with the spray is sufficient after each washing. More thorough cleaning is required only occasionally. It eliminates almost all of the handling—and the consequent hazard of breakage—that is unavoidable in the older way of dish-washing.

### DIMENSIONS AND PRICES

Electric Washing Sink with Spray Tower, Baskets, Impeller,  $\frac{1}{4}$  H.P. Motor, lever operated Drain Controls, N.P. Brass Cover to dish-washer, ordinary Sink with Pop-up Drain and combination Hot and Cold Faucets with Swing Spout, Hose and Spray, Drainboard, and "P" traps to wall.

## Bathroom Accessories

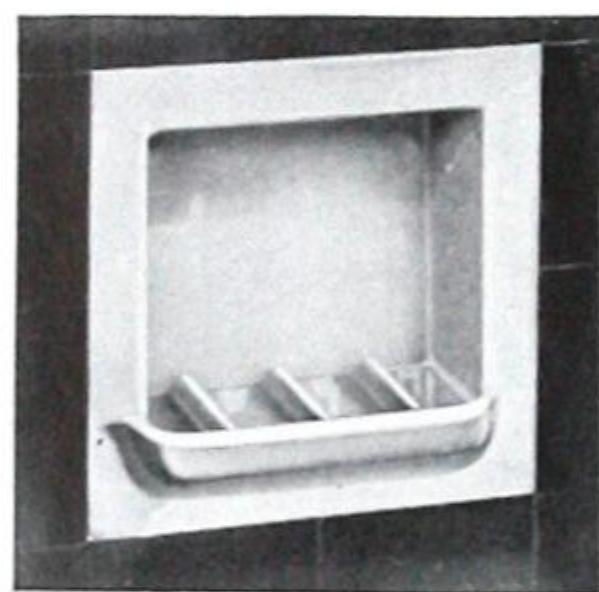

### *Tile-in or Recess Fixtures*

**T**HESE fixtures are designed to take the place of one or more tiles (according to the article) and measure 6" x 6" or 6" x 3" or 3" x 3". They are made of **White Vitreous Chinaware** which is always clean and sanitary, the "recess" feature also preventing the accidental damage or breakage which occasionally happens to fixtures screwed to, and projecting from, the wall.

These tile-in or "recess" fixtures give a finishing touch of comfort and cleanliness to any well appointed Bathroom.

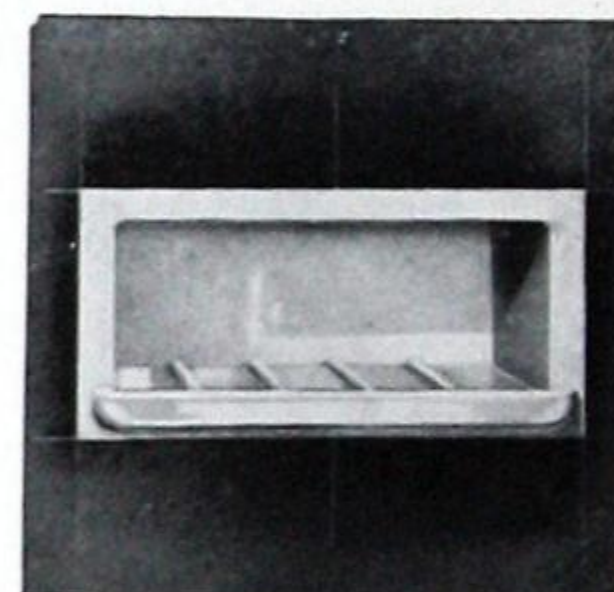

A selection can be made at our Showrooms at 134 Craig Street West, Montreal, where we exhibit a comprehensive assortment of all kinds of Bathroom Accessories, suitable to all tastes and to every requirement in every type of Bathroom from the most luxurious to the most moderately priced.

## "Merion" Automatic Storage Gas Water Heater

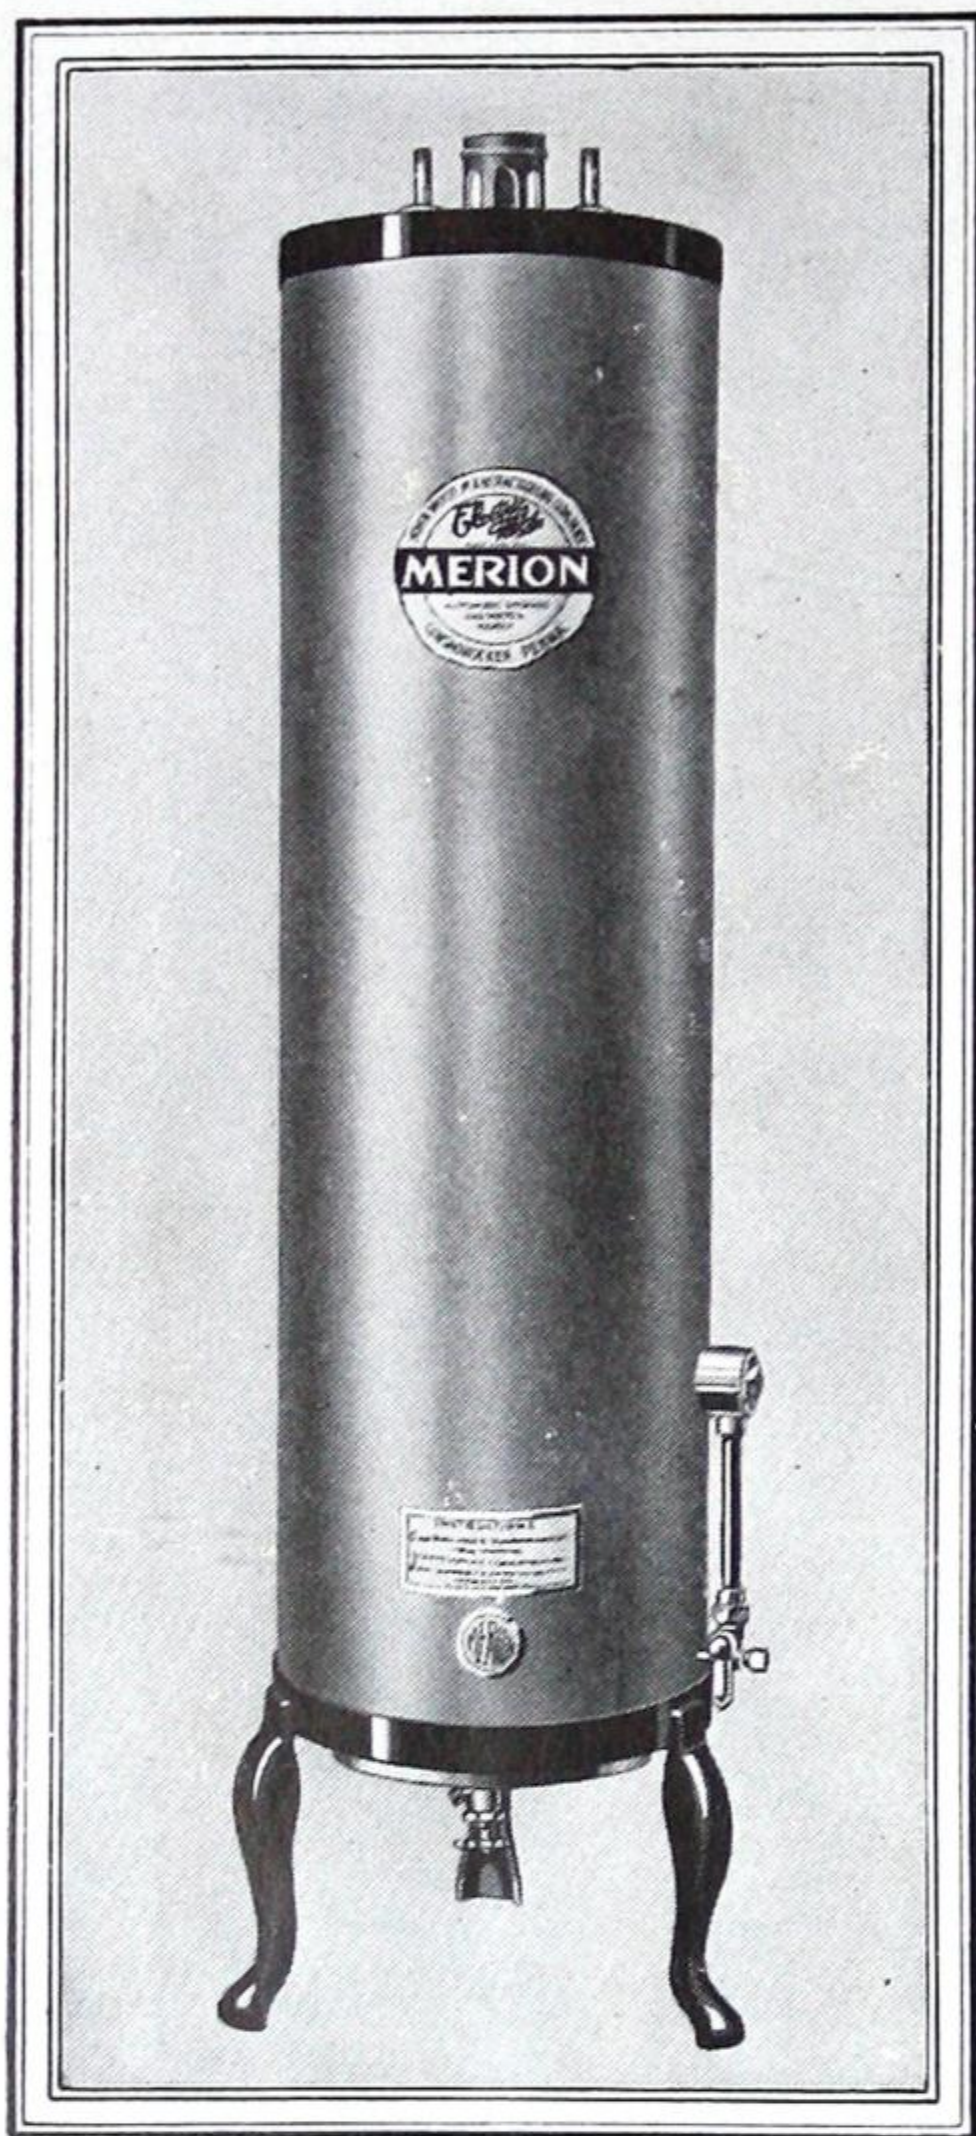

Fig. F-571

A small powerful gas burner, no larger than the burner on a gas range, in combination with a new and revolutionary thermo valve, does away with separate pilots and **cuts the gas bill.**

**In action,** the blaze heats water in 3 distinct ways. First, by contact with the percolator principle heating element; Second, by deflecting the blaze against bottom of tank and then sending the hot burnt gases through an internal flue—heating water all the way, and evenly **both at top and bottom.** This triple method gets all the heat possible out of the gas.

### MADE IN THREE SIZES

No. 1.....	14" x 38".....	15 gallons.....	\$120.00
No. 2.....	14" x 50".....	20 gallons.....	140.00
No. 4.....	18" x 50".....	36 gallons.....	180.00

The "MERION" Gas Water Heater gives a constant, dependable Hot Water service at a low-cost.

It keeps a supply of very hot water always available, day or night, and is fully automatic.

The outside jacket is made of best quality steel and finished with fine lacquer. No wasted heat is thrown off. Even with the water in the tank and pipes at 160 degrees, very little heat is felt on placing the hand on any part of the "MERION" Heater.

It is easy to install, only one gas and two water connections to make.

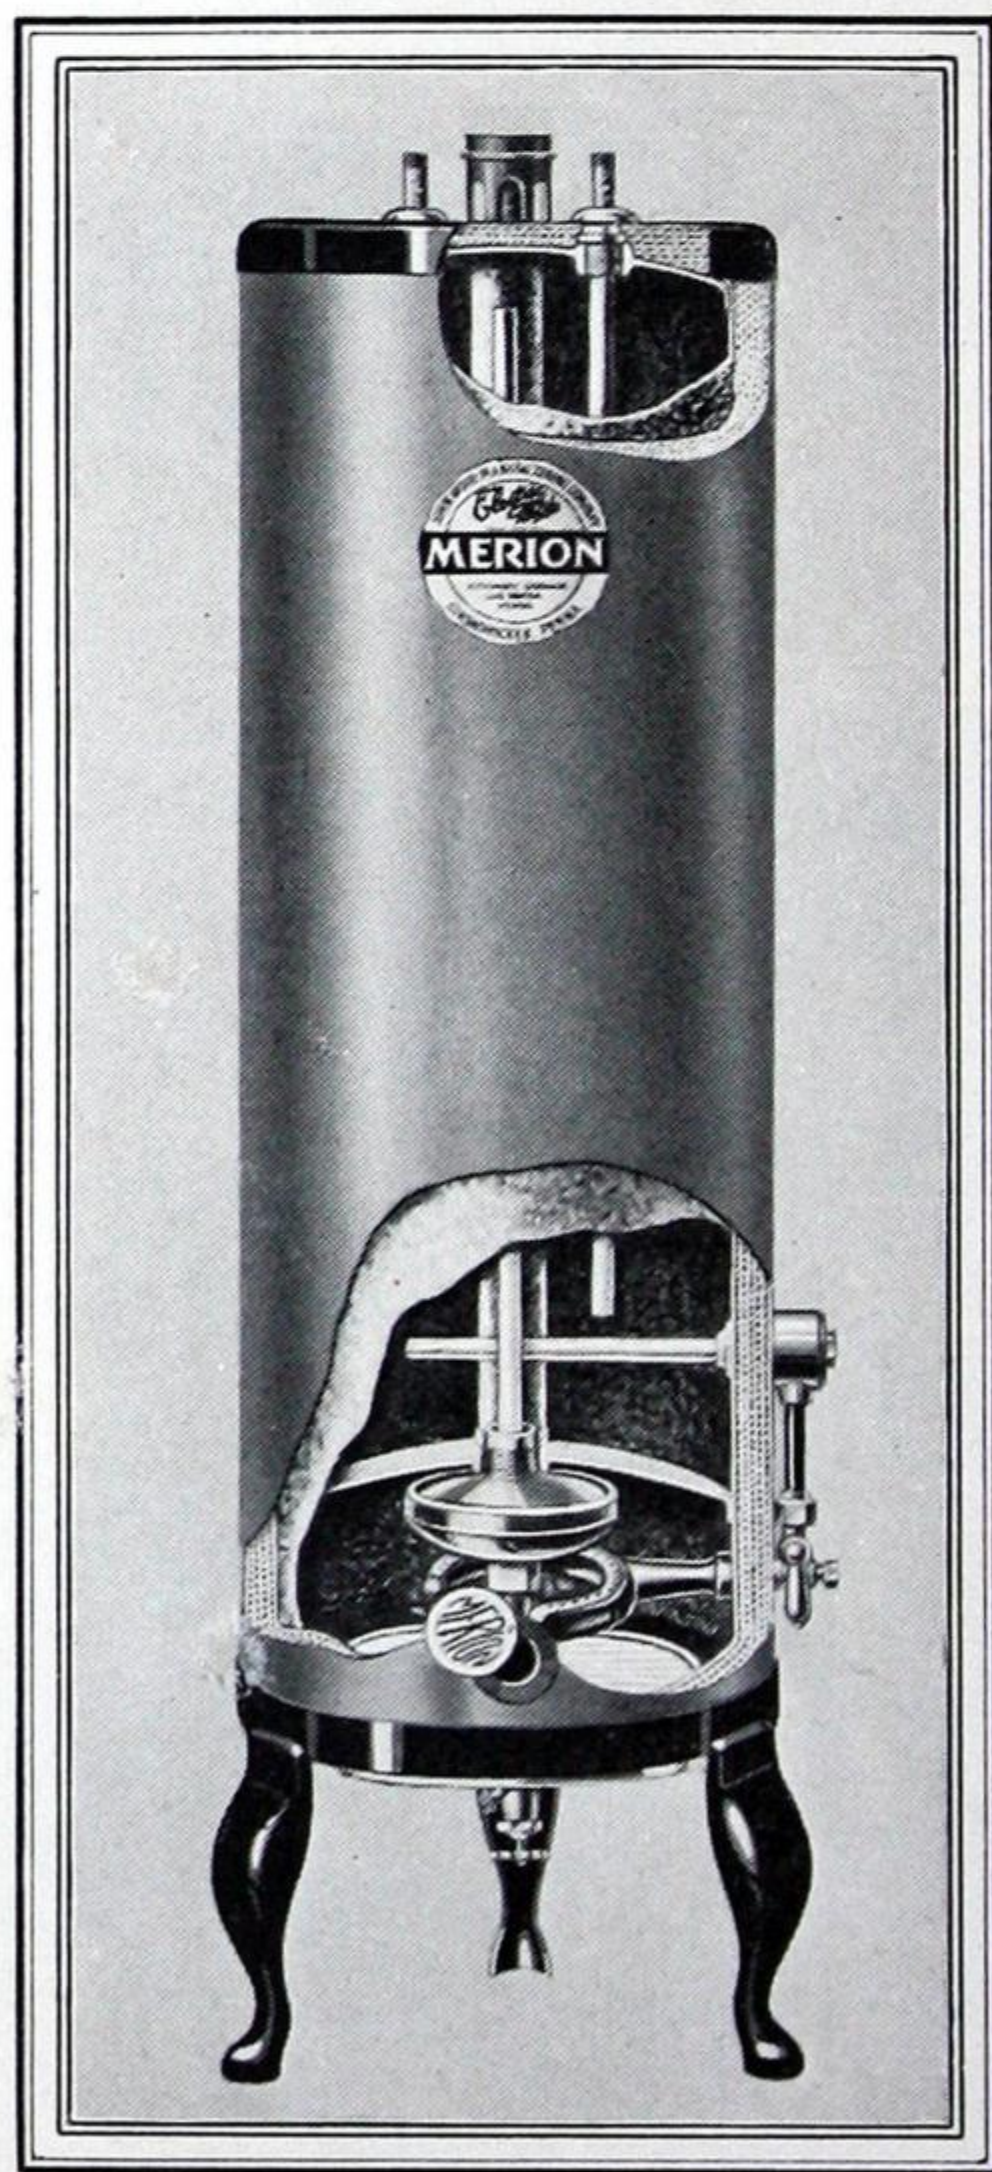

Fig. F-572

### SERIES 400-S

#### Improved Roof Drain for Concrete or Wood Roofs. No Flashing Required.

Provided with an improved type clamping ring which has the same surface contour as the flange of the drain.

Furnished with removable combined sediment cup and strainer. Drain has a total depth of 6¼" over all, making it applicable to all thicknesses of roofs. Made of heavy cast iron, eliminating the possibility of condensation when buried in the roof slab.

For promenade roof a square top, which will fit the body of this drain, can be supplied if desired.

### SERIES 600A

#### Vent Stack Sleeve for Concrete or Wood Roofs. No Flashing Required.

This new type cast iron Vent Stack Sleeve is designed to **positively eliminate the necessity of a copper or lead flashing.** It is equipped with two rings—one, the clamping ring which securely holds the roof felts in place and the other, **a set screw or pressure ring.** This set screw ring is tapped to receive four  $\frac{3}{8}$  inch brass set screws. Tightening these screws affords any desired pressure to be brought on the clamping ring which in turn presses on the felts.

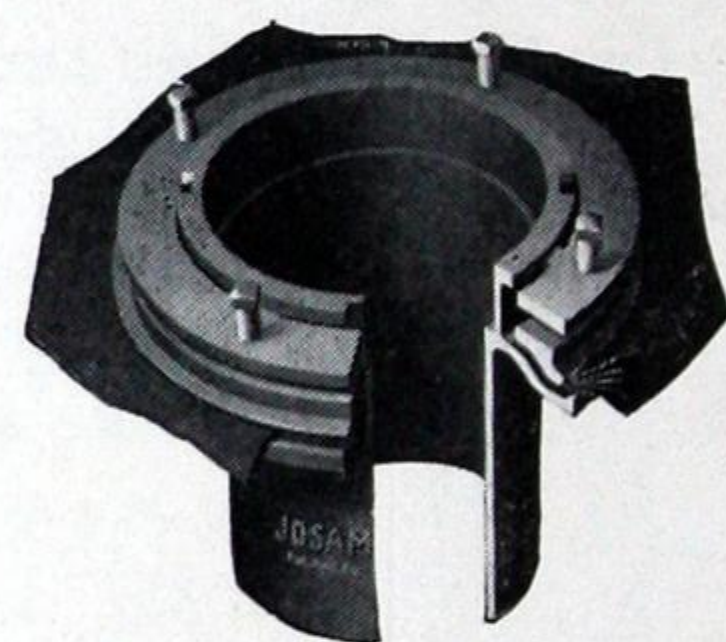

Fig. F-583

For Wrought Pipe connection. If Soil Pipe connector required see FIG. F-585.

#### Josam Expansion Joint Connection (With Brass Sleeve).

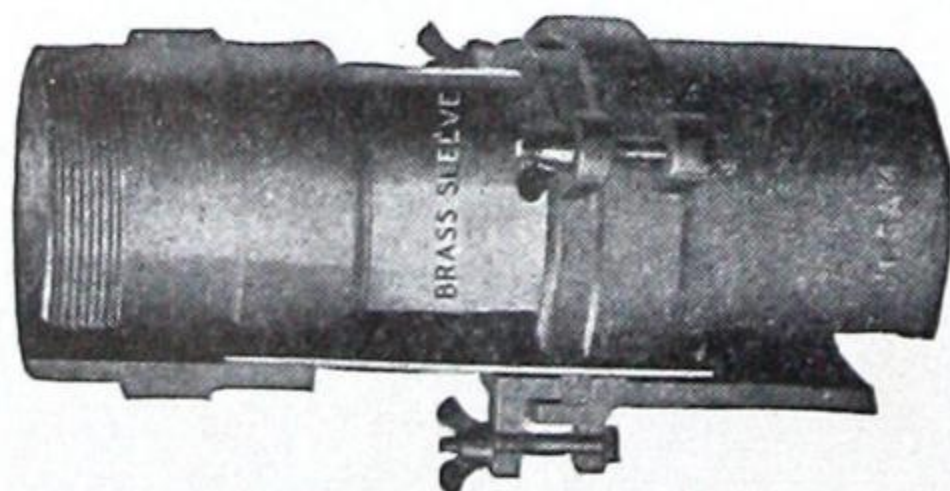

Fig. F-584

For use with any Roof Drain when Expansion Joint is required. Has body of heavy cast iron which provides for a movement of 1 $\frac{1}{2}$  inches each way in the line or a total variation of 3 inches. The heavy gauge brass sleeve has a smooth non-corrosive bearing surface which works freely against a graphite-saturated, round, braided, pure asbestos packing ring.

### SERIES 700A

#### Combined Drain and Deep Seal Back-Water Trap With Clean-out Plug.

This new Drain and Trap is of cast-iron, open-seal type. Back-Water Valve is of all brass construction, and has brass on brass seat, opens easily with flow of water and closes by gravity. The Back-Water Valve has the same size opening as trap of drain and sewer outlet, giving full area through valve. Flap suspended on double hinge, brass pinned.

The Trap is equipped with screw brass clean-out plug, sufficient in diameter and conveniently located to afford ready access to either the seal of the trap or the sewer outlet.

Clean-out plug in each size has a diameter two inches greater than the outlet in the drain. Trap has long spigot end outlet.

### SERIES 900

#### Drain for Garage and Industrial Plant Floors. With Clean-out Plug.

This Drain is designed primarily for garage and industrial plant floors where there is a large flow of water and heavy deposits of dirt and grease, where accessibility for cleaning is very necessary and strength and durability are of great importance.

The heavy special anti-tilting grate lifts out, making the sand bucket, which is equipped with hand grips, easily removable for cleaning. Drain can also be equipped with gas seal cone which is securely bolted to grate and which prevents re-entry of fumes into building. The drain has special brass clean-out plug which sets flush with the floor and is of 2" larger diameter than drain outlet. Drain is regularly equipped with large pocket for brass Back Water Valve, which can be furnished at added cost; drain is furnished in various heights to suit varying thicknesses of floor slabs.

# “Sirdar” Round Water and Steam Boilers

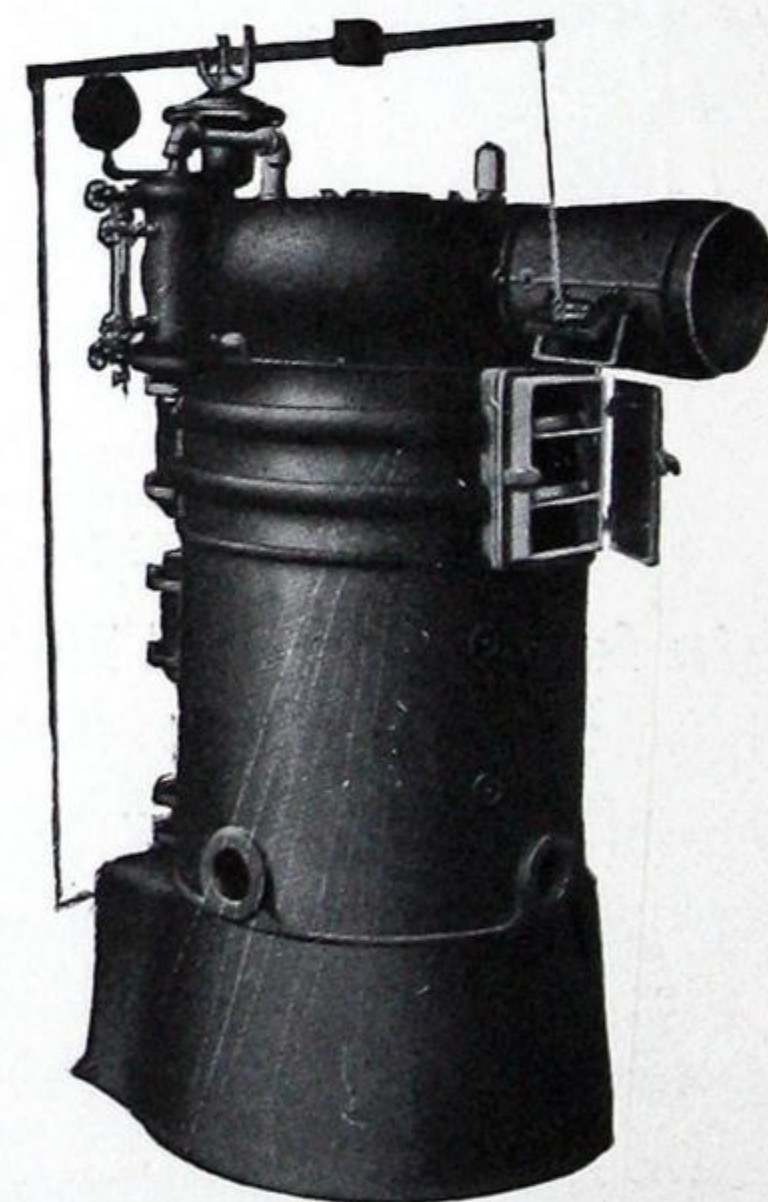

*Fig. F-589*  
Type “A” with Low Base

*Fig. F-590*  
Type “B” with Low Base

*Fig. F-591*  
Type “B” with High Base

*Fig. F-592 (Steam Boiler)*  
Type “C” with Fire Pot,  
Two Sections, and Dome

**Sirdar Boilers** are made entirely of the best cast iron, and are practically indestructible. Steel Boilers become coated inside with scale, which is a non-conductor of heat. They also rust rapidly, and the tubes require to be renewed at short intervals. **Sirdar Boilers** will not scale, and are almost impervious to rust, hence their great efficiency and durability.

FOR RATINGS, DIMENSIONS AND PRICES, SEE OUR “SIRDAR” HEATING CATALOGUE

## Warm Air Furnaces

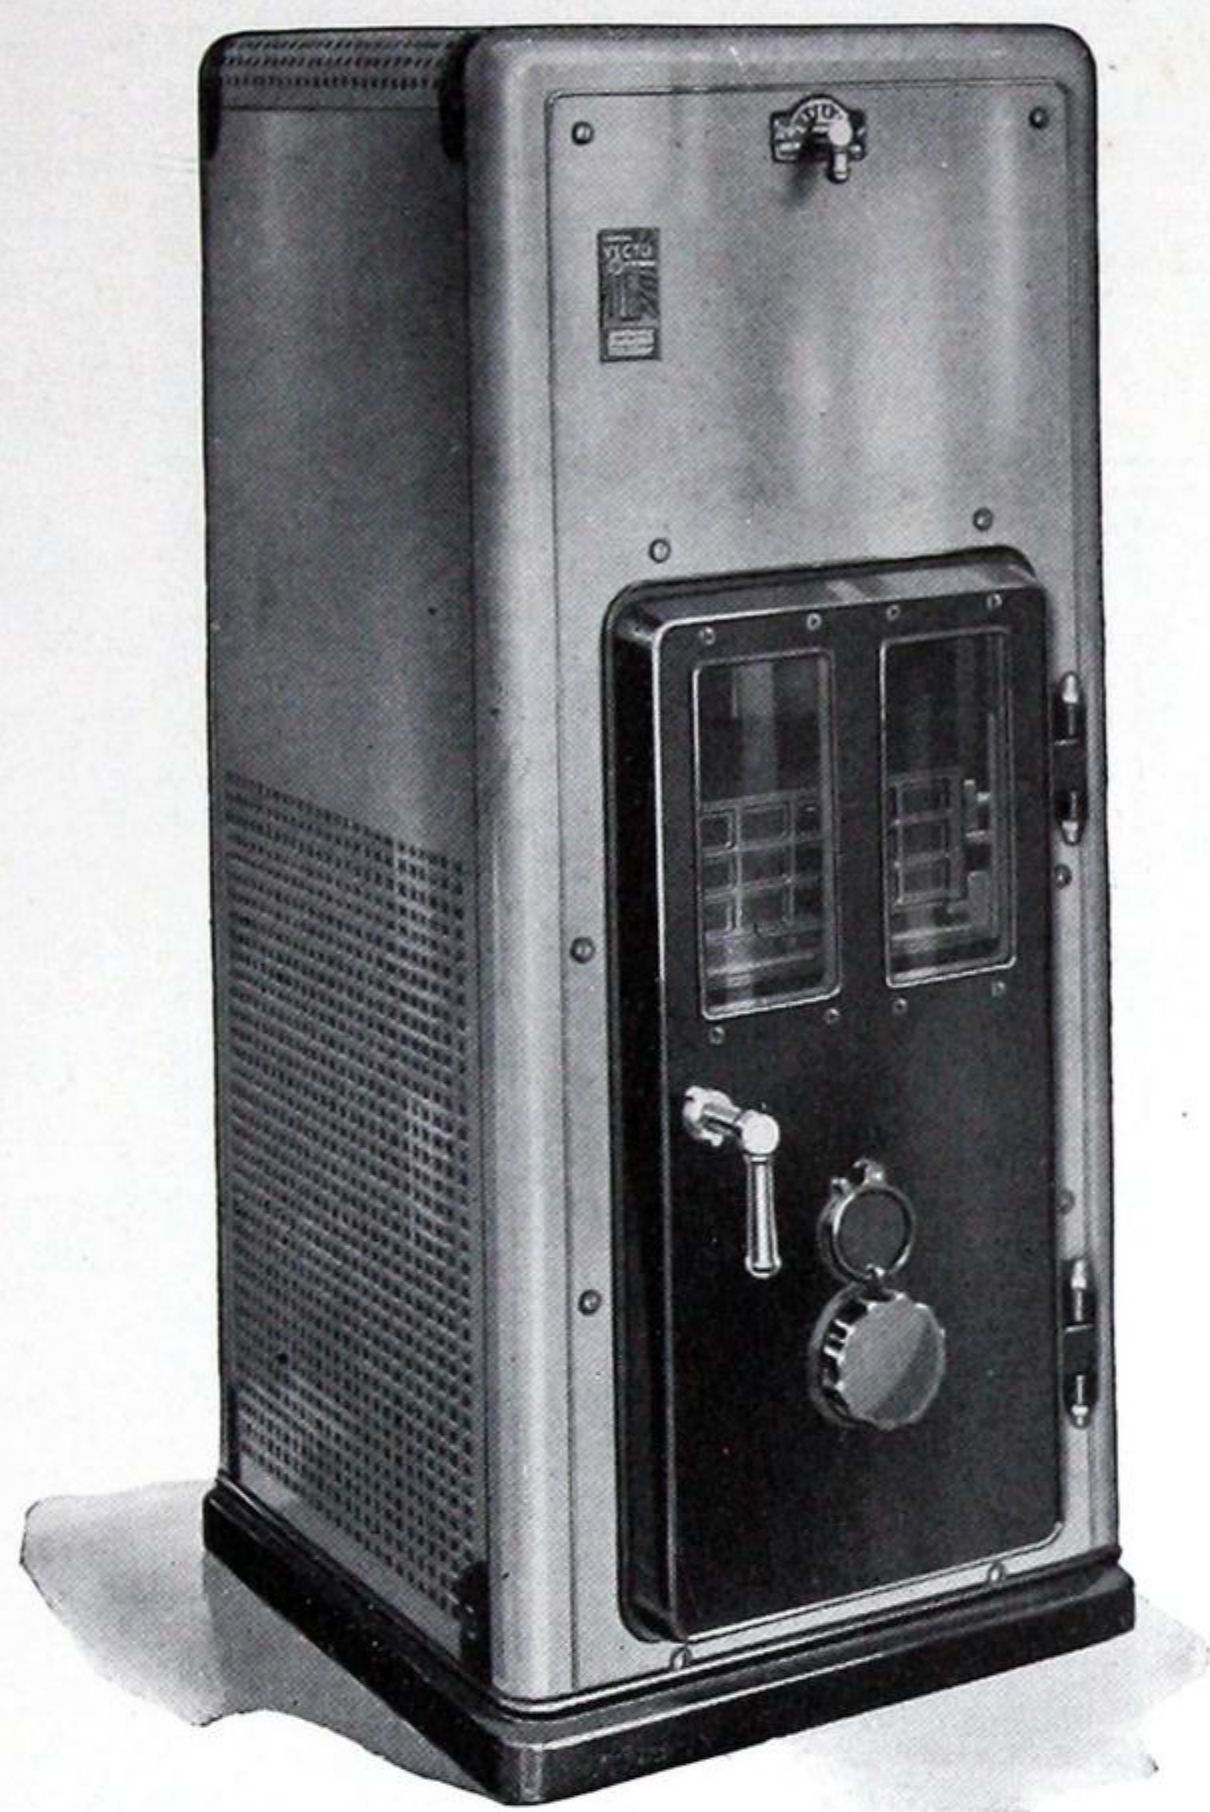

Fig. F-613

### "IDEAL VECTO" HEATER

#### Special Features

Solid seamless body construction, preventing gases, dust or soot from escaping into rooms. Cleanliness and economy are insured. Special heating surface warms large volumes of air. Lock-safe door, an extra guarantee of cleanliness, safety and economy. Pyrex Glow Panels withstand high temperatures and remain transparent. Exterior finish is a beautiful vitreous enamel, lustrous and permanent.

Measurements 49" high, 22" wide, 34" deep

For use in buildings containing not over 6,000 cubic feet contents.

### "FINDLAY" FURNACE

"STERLING", "KIR-BEN" & "ROYAL"  
FURNACES, ALL SIZES.

#### Burns Soft Coal Smokelessly!

All sizes are equipped with the Hot Blast Attachment which makes possible the burning of all grades of coal with cleanliness and economy. The Fire Door is extra large, giving plenty of space for firing. Large chunks of coal or wood can be handled with ease.

Moisture is supplied to the air. From seven to ten gallons of water are evaporated every twenty-four hours. The large, properly-placed Vapor Pan makes this possible.

## "Peerless" Pneumatic Water Systems

FOR COUNTRY HOUSES, FARMS, Etc.

The PEERLESS Water Systems are made in many series, designed to operate under any possible combination of conditions and capable of furnishing an adequate water supply for private homes, hotels, golf clubs, public institutions, villages, etc. Advise us of your requirements and we will send full details of equipment suitable for your purpose.

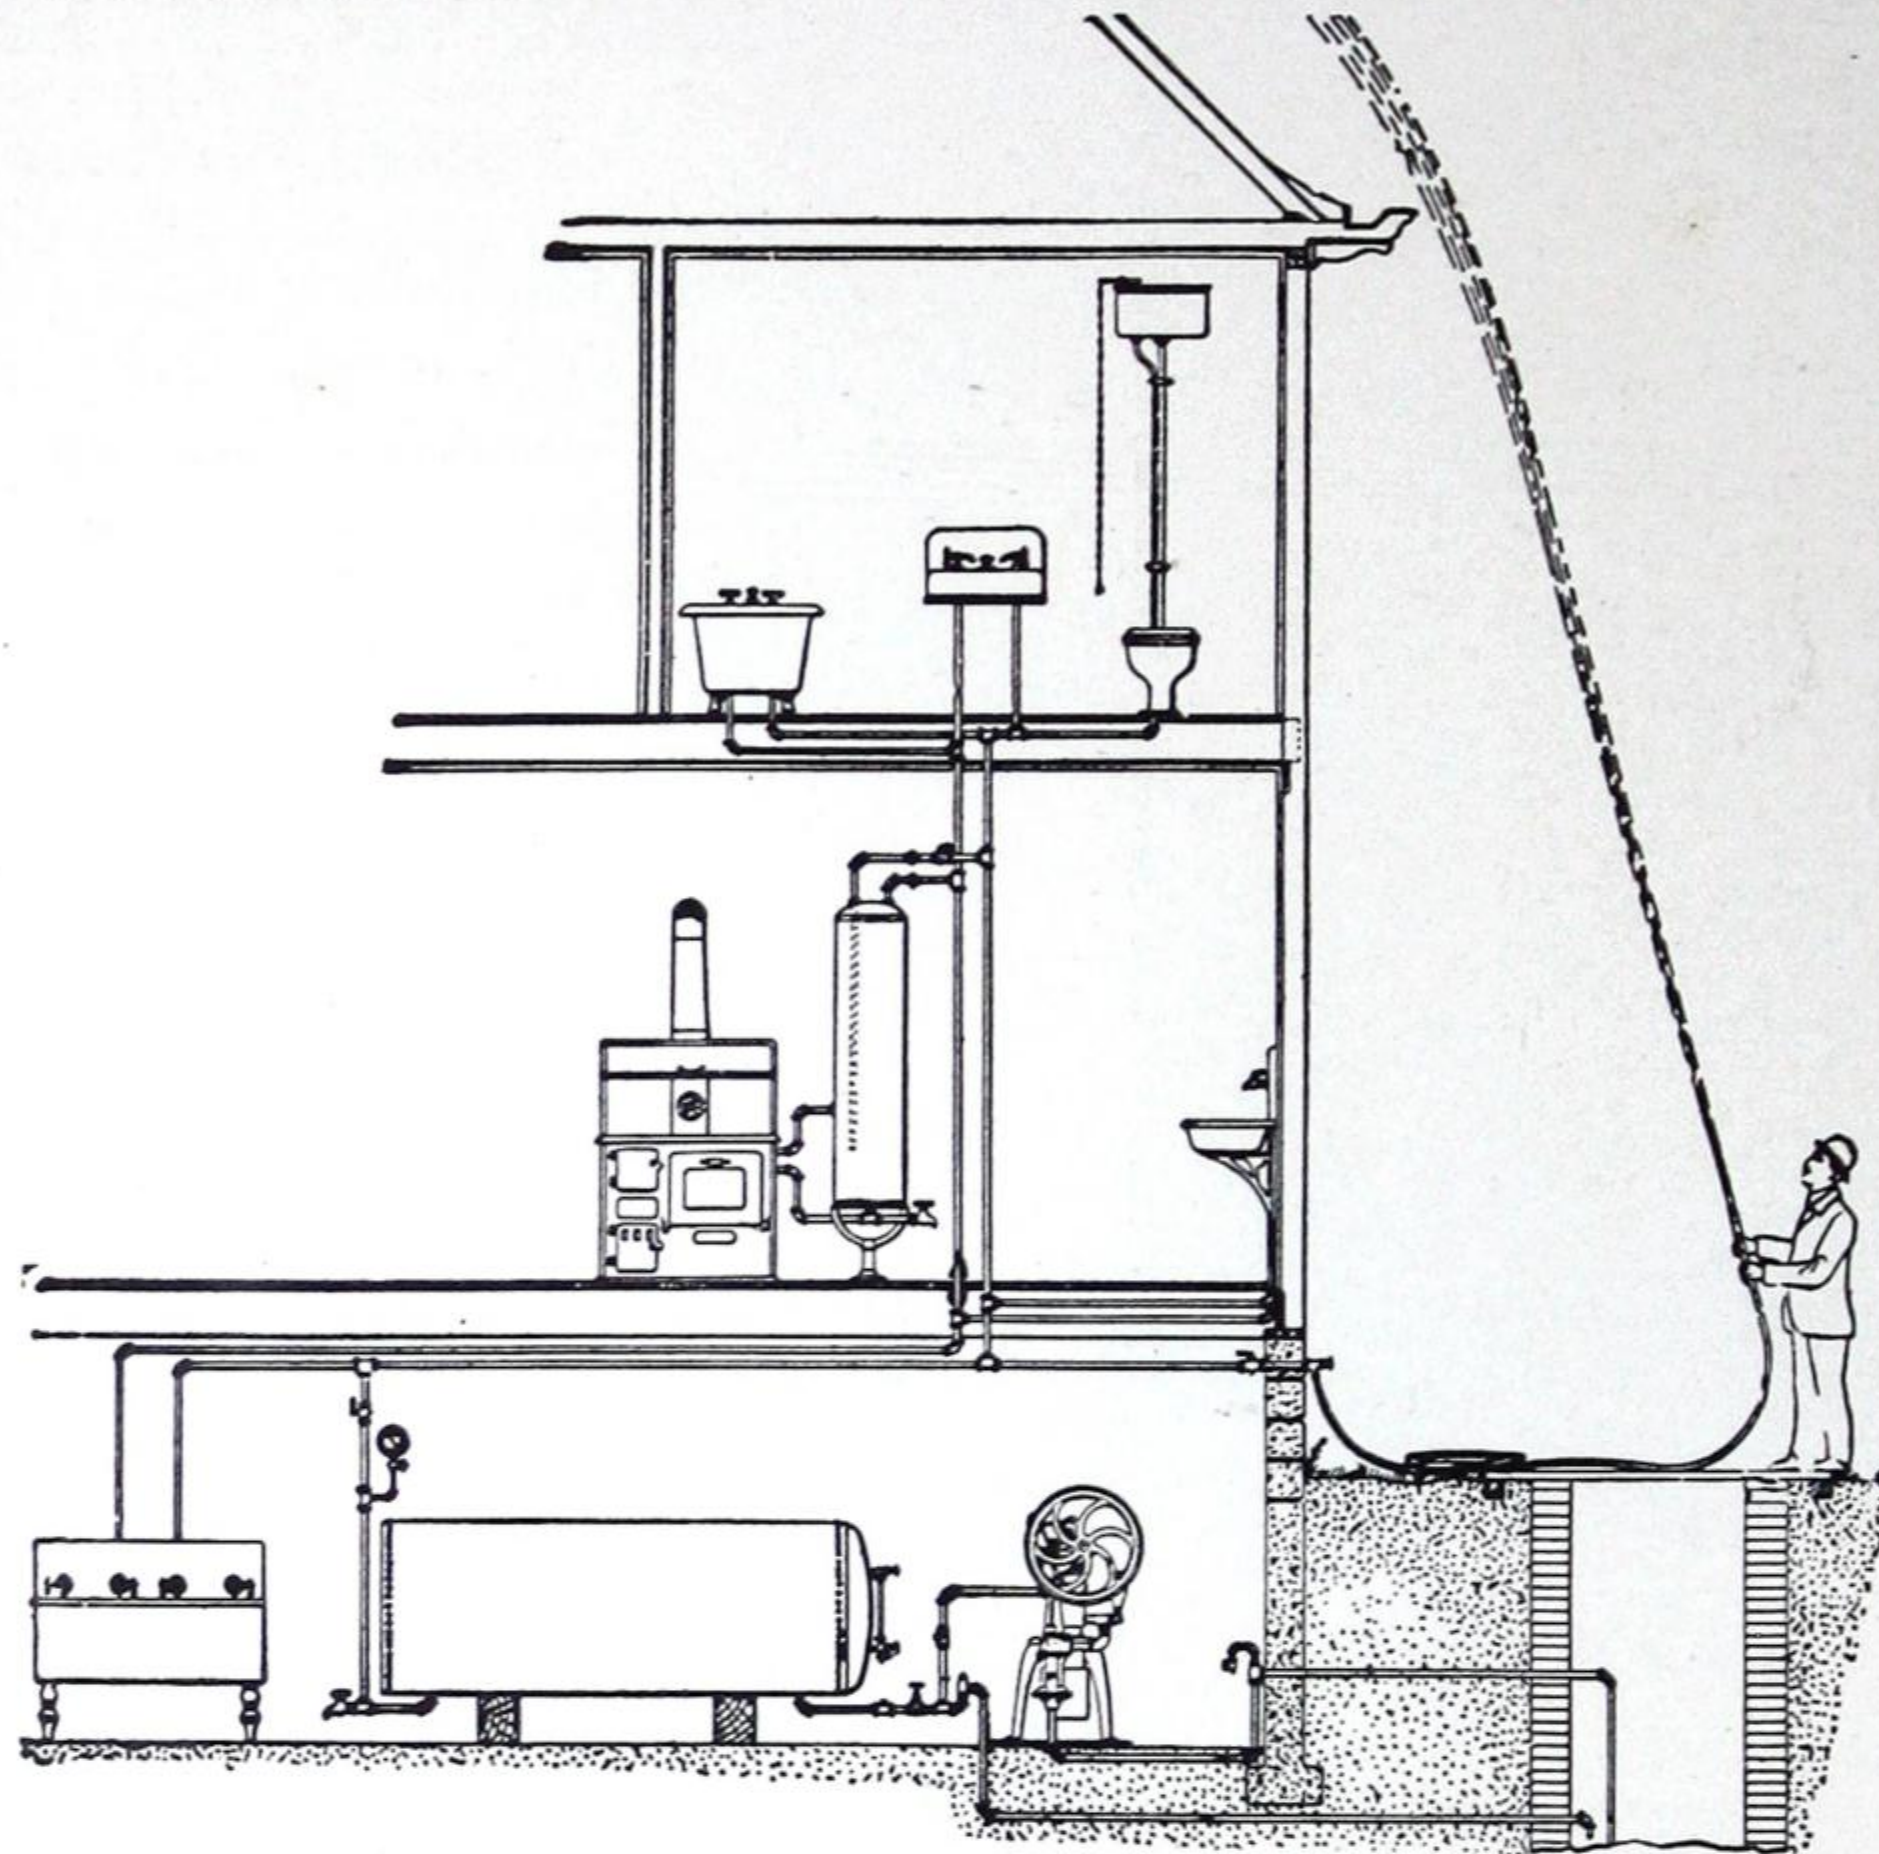

Fig. F-615

### SECTIONAL VIEW OF INSTALLATION, OPERATED BY HAND OR POWER

The operation of a PNEUMATIC WATER SUPPLY SYSTEM is quite simple, and very little technical knowledge is required. As shown in the above illustration, an ABSOLUTELY AIR-TIGHT TANK is fixed in the basement (or other suitable location) and two pipes are connected to the bottom of the Tank, one to convey the Water from the Pump to the Tank, and the other to carry and distribute the Water to the various Plumbing Fixtures.

As the Water is forced into the bottom of the Tank, the Air in the Tank is gradually compressed, creating a Force known as PRESSURE, and when a Tap is opened this PRESSURE (Compressed Air) forces the delivery of the Water. Should a Tap be opened in the Basement, ALL of the Water in the Tank may be forced out by the Compressed Air expanding back to its normal volume. NO AIR CAN ESCAPE FROM THE TANK WHILE ANY WATER REMAINS IN IT as the Inlet (or Delivery) pipe and Outlet (or Discharge) pipe are connected into the bottom of the Tank.

For each pound of pressure indicated by the gauge, the water can be forced up through a vertical pipe to a height of 27 inches. Therefore, 60 pounds pressure will elevate water 135 feet above the Tank, so that, while all the water in the Tank would be discharged from a basement tap, a lesser quantity would be discharged from the fixtures in the upper floors.

With an ABSOLUTELY AIR-TIGHT TANK the contained air can be lost only in one way, viz: its absorption by the water, and as a rule the loss due to this cause is infinitesimal. More Air can be supplied, however, when it becomes necessary, by placing an "Air Intake Valve" at a convenient point on the Pump or the Suction Line (for small installations), or by the use of a Separate Air Compressor driven by power (for very large systems).

The Water comes direct from the source of supply and is at no time exposed to the open air, dust, or other impurities. The Tank, etc., being located in the basement (or underground) the Water is cool in Summer, and free from the danger of Frost in the Winter.

**THE PUMP MAY BE OPERATED BY HAND, GASOLINE ENGINE, OR ELECTRICITY.**

Particulars and prices of Tanks, Pumps, and Fittings furnished on application.

## "Mueller" Water Pressure Regulator

for controlling the pressure in Water Pipes

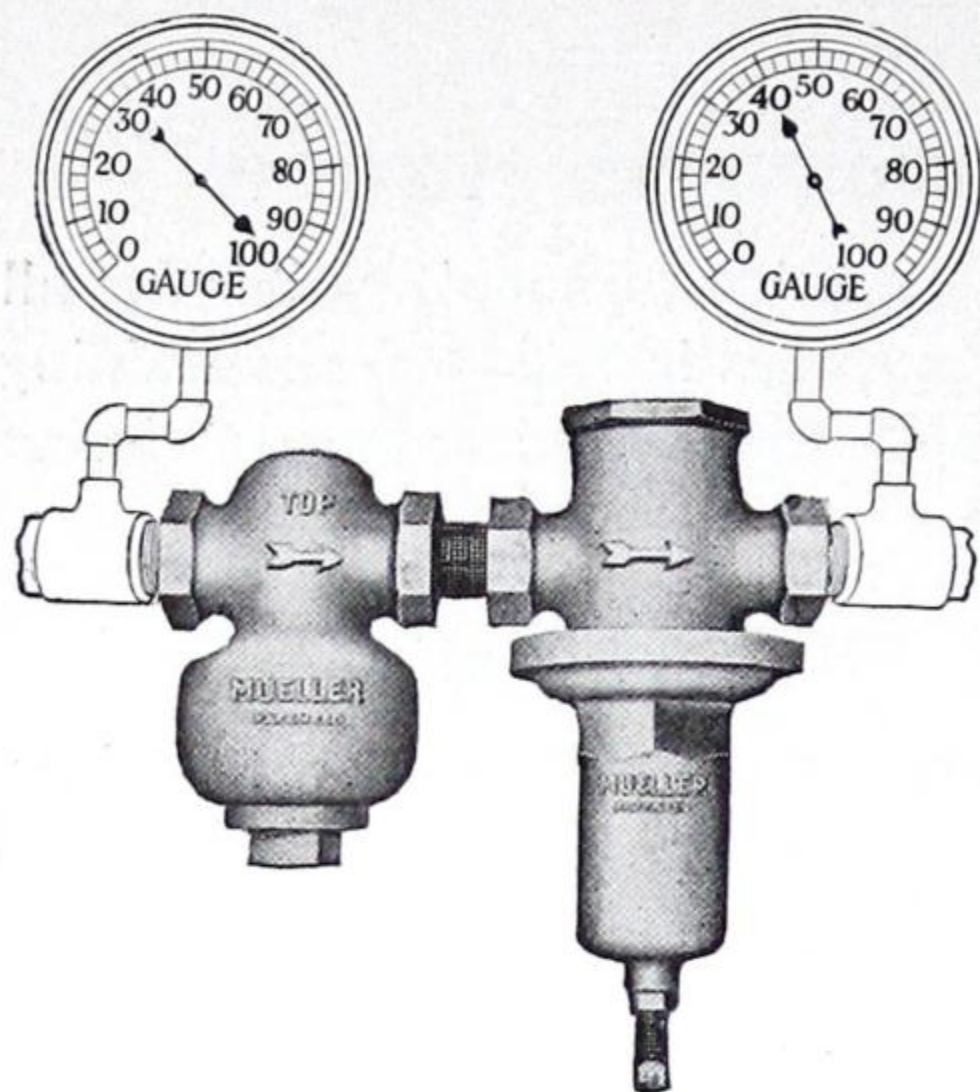

Fig. F-618 Showing Regulator with Strainer

This Regulator is made of Bronze, and is non-corrosive; it has full seat opening to pass a large volume of water; the wearing parts are easily replaced; the diaphragm is made of a special composition which is extremely durable, and the valve is guaranteed to give thoroughly satisfactory service.

It is particularly recommended to fix a Strainer (as shown) with this Regulator. This strainer has bronze cleanout and copper screen, which keeps out sand, grit, scale, cuttings, etc.

### Prices of Regulators

Size, inches.....	1/2	3/4	1	1 1/4	1 1/2	2
Each.....	\$20.00	21.50	34.60	89.00	120.00	173.00

Each.....	\$4.00	4.50	8.00	13.50	23.40	34.00	45.00	54.00	97.00

Gauges are extra. Prices on application.

## "Mueller" Automatic System of Hot Water Heat Control

Ensuring Uniformity of Temperature under all conditions.

No Expansion Tank required (open or closed) eliminating danger of an overflow or freezing, etc.

Automatically feeds fresh water to the Boiler, prevents excessive pressure and regulates the temperature by means of the Damper Control.

The Reducing Valve and Relief Valve are positive in action. The working parts are of bronze, with phosphor bronze diaphragms.

Price of special fittings, including Damper Control..... \$80.00

Price of special fittings without Damper Control..... \$65.00

# Septic Tank Sewage Disposal Systems

FOR COUNTRY HOMES

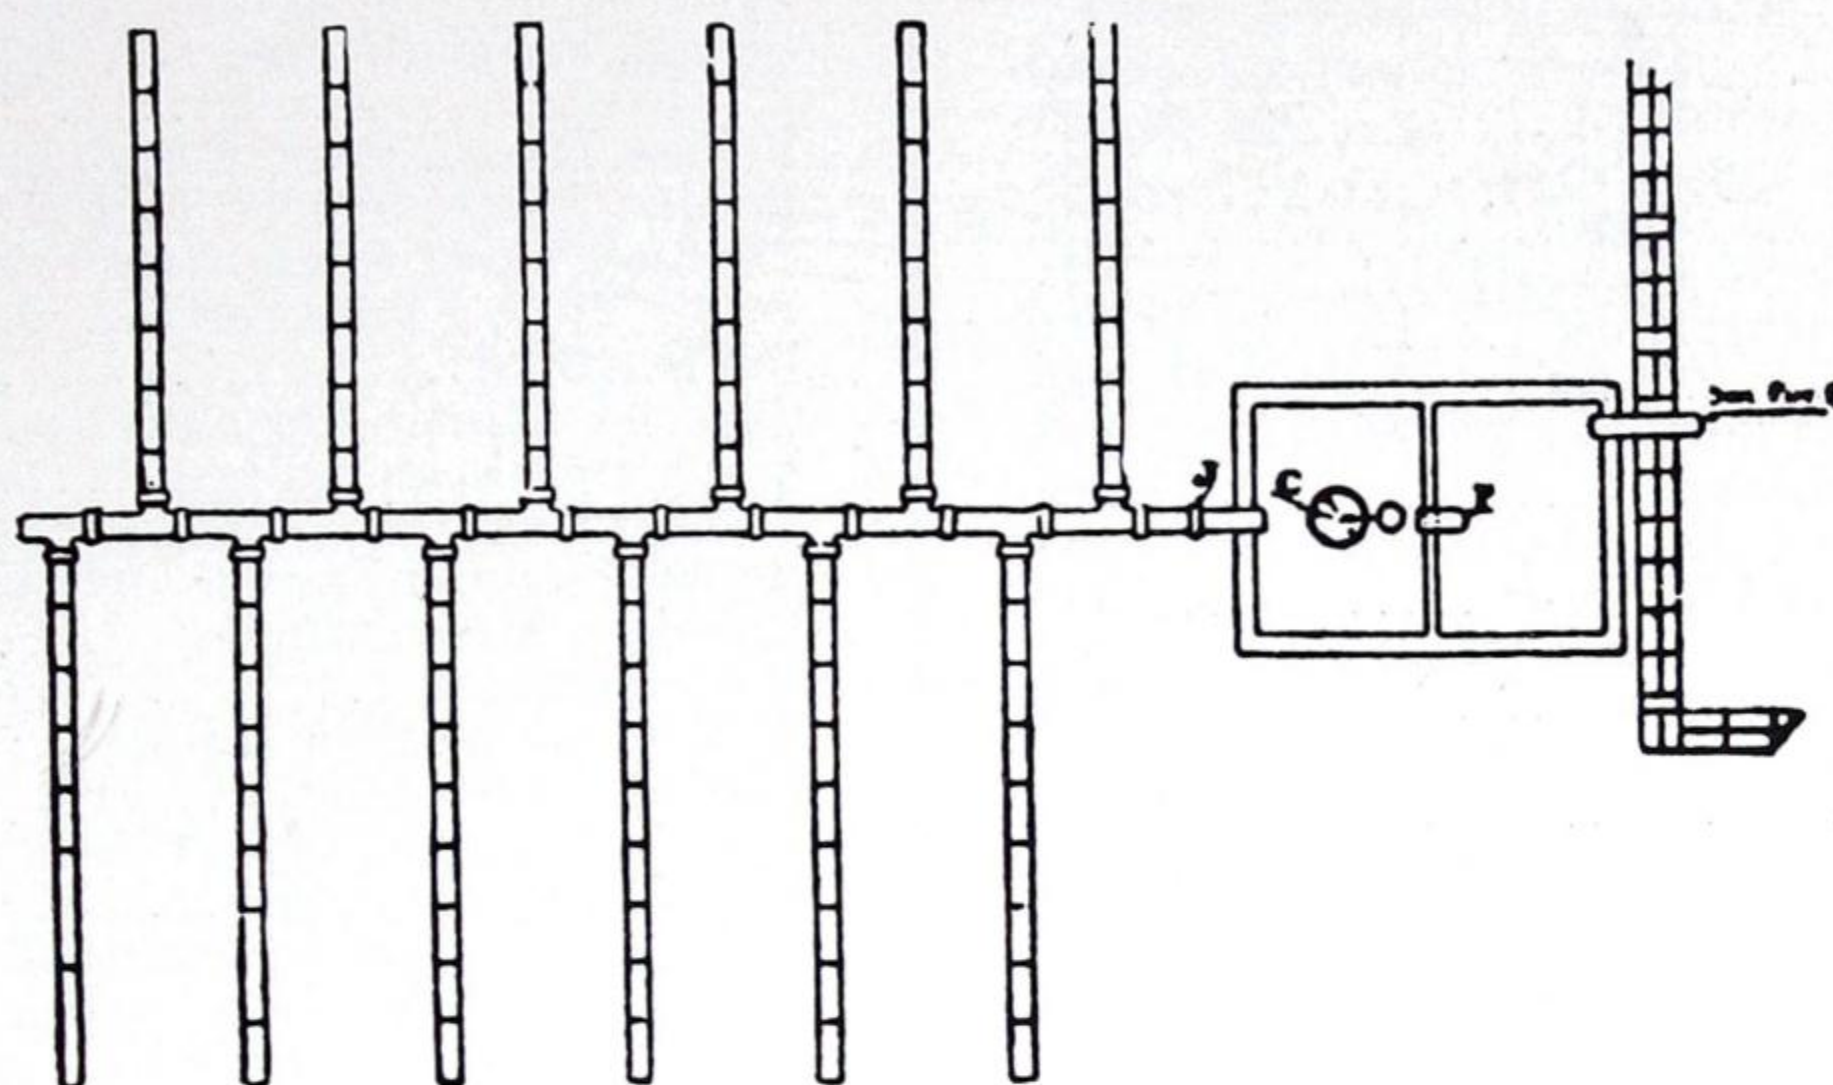

Fig. F-620

## Showing Septic Tank, Dosing Tank, and Soakaway Pipes

Many farmers and suburban dwellers and residents of small towns would be glad to install modern plumbing in their homes if they knew how they could economically dispose of the sewage in a sanitary manner. This can be accomplished without the use of the evil-smelling and disagreeable cesspool, and practically without any attention whatsoever once the Septic Tank system is installed and in working order.

There is an impression in the minds of many rural residents that the cost of a Septic Tank system is excessive, but we desire to point out that the cost is very little if any more than the cost of a plumbing installation in the city where one pays a yearly tax for maintenance. It should not be looked upon as a luxury but as a necessity, for there is no greater menace to health than the old-fashioned but still generally used open pit-closet or the cesspool. The Septic Tank with surface absorption bed is based on nature's way of disposing of waste matter by the action of certain bacteria and the aid of oxygen and sunlight. The **tank** is constructed with **two chambers**, the **septic tank proper** and the **dosing chamber** where the automatic syphon is located.

Raw sewage should be retained in the first chamber, which really is the "septic" tank, for about 24 to 48 hours. While the discharge should be not oftener than twice or three times per day, the method to adopt in arriving at the size of a tank is as follows:

Allow 25 gallons of fluid per person occupying the house ( $6\frac{1}{4}$  gallons equal 1 cubic foot), and construct the dosing chamber accordingly.

The sewage must be discharged intermittently, through an Automatic Syphon which can be depended on to operate automatically at the required intervals. For this purpose we can confidently recommend the Syphon shown Fig. F-621.

These syphons discharge when the sewage is 14 inches in depth from the low water level, or about 17 inches from the bottom of the tank.

Each syphon has a bead on the long leg. This bead should be placed on a level with the bottom of the tank; the portion below being embedded in cement and set level.

NOTE—In the Plan or Layout Fig. F-620 the Y Branches down the centre line have cemented joints, but the lateral Field or Tile pipes have open joints. This disposal field should begin 25 feet from tank.

Do not allow disinfectants to enter the tank or the septic action will be destroyed. See your plumber to-day, or write us giving details and we will advise you.

Fig. F-621

4-inch AUTOMATIC SYPHON Each \$24.00
